CENTRE FOR DEVELOPMENT STUDIES

Annual Report

2008-09
The Centre for Development Studies (CDS) was registered as a Society in October 1970 under the Travancore-
Cochin Literary, Scientific and Charitable Societies Act. The main objective of the Centre is to promote research
and teaching in the disciplines relevant to development.

Over the years, the Centre has established a tradition of interdisciplinary research in areas including agricultural
economics, industrial economics, labour economics, social and economic history, economics of health and
nutrition, population studies, women's studies, statistics and econometrics.

The teaching programmes of the Centre include an M. Phil Programme in Applied Economics affiliated to the
Jawaharlal Nehru University (JNU), a Ph.D Programme affiliated to JNU and the Kerala University, a Diploma
Programme on Universalising Socio-Economic Security for the Poor and short term training programmes for
researchers.

The M.Phil Programme is designed to provide a broad understanding of economic
theory and Indian economic problems, research in applied economics. Methods
of qualitative, theoretical and historical-emphasised.

The Diploma Programme on ‘Universalising Socio-Economic Security for the Poor’ is a collaborative effort of the
Hague and the Self Employed Women’s is offered to mid-career professionals
and protection in developing and for those working on strategies for
pro-poor growth and strengthening the asset base and capabilities of the poor.

The Centre has a core academic staff engaged in teaching and research. These activities lead to a range of
research publications, lectures, workshops and seminars, as well as M. Phil and Ph.D dissertations on problems
related to development. Some of these publications are brought out under the Centre’s own publication
programme. The faculty also involve themselves in collaborative research and teaching with other academic
institutions, as well as serve as members on various advisory and governing bodies.
The Centre gratefully acknowledges the support received from:

- Government of Kerala
- Planning Board, Government of Kerala
- Indian Council of Social Science Research
- University Grants Commission
- Jawaharlal Nehru University
- University of Kerala
- Reserve Bank of India
- Planning Commission, Government of India
- Ministry of Overseas Indian Affairs, Government of India
- International Development Research Centre, Canada

Several other Central and State Government agencies and institutions have supported the Centre’s academic and research activities. We are grateful to them.
## CONTENTS

### 1. OVERVIEW

1. 7

### 2. REVIEW OF RESEARCH

1. (1) Macro Perspectives, Globalisation and Development 12
2. (2) Agriculture, Rural Economy and Local Governments 14
3. (3) Industry, Innovation and Infrastructure 17
4. (4) Human Development, Health and Education 19
5. (5) Studies on Migration 25
6. (6) Employment and Social Security 28
7. (7) Gender and Women’s Studies 30
8. (8) Other Studies 31

### 3. ACADEMIC AND TRAINING PROGRAMMES

1. (a) Doctoral Programme in Economics 33
2. (b) M. Phil Programme in Economics 36
3. (c) Short Term Training Programmes 38
4. (d) Research Affiliation 40

### 4. PUBLICATIONS

1. (a) Books 42
2. (b) Journal Articles 43
3. (c) Chapters in Books 44
4. (d) Other Publications 46
5. (e) Working Papers 47

### 5. ORGANISATION OF SEMINARS AND WORKSHOPS

1. (a) Open Seminars 48
2. (b) Faculty/Students Seminars 49

APPENDIX 1 - REVIEW OF RESEARCH .......................................................................... 83
INTRODUCTION

This is the 38th Annual Report of the Centre for Development Studies (CDS), Thiruvananthapuram, Kerala. In close to four decades since its inception in 1971, the institution has significantly expanded and diversified its activities. Eloquent testimony of this is the range of subjects that has stimulated our research scholars and the scope and value of their findings. In tandem, there has been progress in capacity building and training, and in extending outreach programmes. The infrastructure has been added to and modernised, while finances have remained stable.

In its vital first decade, the CDS was fortunate to have some of the eminent economists in the country among its faculty. The centre’s academic foundation and vision were shaped by this far-seeing founding faculty. Issues related to the macro economy, agriculture and rural economy, industry, employment and labour figured high on the research agenda at that time. Socio-economic concerns such as poverty, nutrition, education and health also received a great deal of attention. From the early days, the tradition of research at the CDS has been to undertake theory-led empirical studies, without losing sight of the historical perspective. It was also understood in the formative years that research combined with teaching resulted in a strong synergy, instruction often reinforcing investigation. The MPhil programme in applied economics, introduced in the mid-1970s, was an acknowledgment of this.

It was also recognised that in a large and diverse country like India, the problems of development could be best understood by analysing them at the regional/local level. This produced a large number of studies involving regional comparisons, and, given its location, many of the CDS papers focused on the State of Kerala. In the mid-1980s, an international
training programme on population and development was set up at the Centre with the backing of the United Nations Population Fund. This was in recognition of the contribution the CDS had made towards explaining the phenomenon of very high levels of human development in Kerala, though per capita incomes were low. The new programme acted as a catalyst on research in the areas of population, poverty, human development and associated subjects.

The mid-1990s saw the Centre’s involvement in a large research programme for strengthening local-level research capacity in the State. The UN-funded programme came to an end in 2001 and the state project in 2004 when the agreements with the agencies concluded. In recent years, the core activities of the CDS have been confined largely to research, the two-year MPhil course and the four-year PhD programme. The Centre’s research output has not only added to the social science knowledge system but also entered the public domain, besides providing useful inputs to policy-making bodies at various levels. CDS alumni now run into a few hundred and occupy high positions in academic institutions, policy-making bodies and public service.

While taking note of past achievements, it has to be emphasised that the Centre now faces a number of new challenges, none of which can be sidelined. Rather, they require the serious attention of all stakeholders. In this overview, we attempt to draw attention to the present scenario and suggest possible ways forward.

Research

From the very beginning, faculty of the CDS have been granted the freedom to choose their own subjects for research. This practice, combined with the faculty having diverse research interests, resulted in the Centre’s work looking into the dynamics of a wide range of issues. While such distinctiveness in research had to be appreciated, it also raised questions about the focus of research at the CDS. In response to this, the Centre prepared a Vision Document and a Medium Term Work Plan for 2005-15. The broad subjects of research identified by the faculty and outlined in the document are taken into account when seeking external funding for research.

An examination of research projects taken up in the last three years reveals that there has been a tendency among scholars to cluster inquiries around certain themes. For instance, the review of research for 2008-09 indicates a bunching-up around issues such as the global financial crisis and its impact, innovation systems, child health and nutrition, rural employment and social security, health-care financing, and international migration. These are highly relevant topics, and if consciously broadened and deepened, the research might yield substantial knowledge over the course of the next two or three years. A major challenge the faculty faces is figuring out how to go about internalising such synergy.

A closely related issue is that of the need to maintain a certain balance in research subjects. In the initial decades, researchers at the CDS made important contributions to analysing issues in some of the core sectors of the economy but work on such areas has considerably slowed down in recent years. For instance, the CDS was well known for its work on Indian agriculture. The challenge now is to maintain an interest among the faculty in such topics. Given that the strength of the faculty is only about 25 at any point of time, significantly broadening the area of research is difficult. Part of the problem can be tackled by encouraging MPhil and PhD students to take up research in such areas. However, it would also require some restrictions on project-driven research, prioritisation of the agenda for research, and its periodic review and implementation. At a time when socio-economic changes take place at a rapid pace, prioritisation and implementation of research are daunting tasks. Nevertheless, the Centre can commit itself to research in selected subjects if there is firm funding support from external sources to set up units mandated to work on them. Some of the research units established at the CDS in recent years have to be seen in this perspective.

A number of measures, which need to be earnestly pursued, to address the dilemmas mentioned above, are summarised. (1) Each faculty member presents an annual research plan...
outlining the completed, ongoing and new studies to be initiated during the year at a faculty workshop. It is proposed that a panel of external experts be invited to these workshops (it was once done earlier) to comment not only on the work of the faculty but also to identify important gaps in research. Such gaps could be filled by appointing additional regular, visiting or adjunct faculty. (2) A process of reviewing the activities of all the sponsored research units in the CDS has been put in place. Such reviews and the guidance of the advisory committees of these units should make it possible to undertake more focused research. (3) The present procedure for clearing externally funded research projects needs to be looked at afresh. Very often, we end up undertaking projects that are financially attractive but not so good in research content. (4) Students have to be encouraged to work in the priority areas identified. This would require better interaction between the faculty and students and creating incentives for students to prefer such subjects.

Promotion of the Usage of Research

The media used for publicising and promoting the use of research output are professional journals, popular magazines and newspapers, books, seminars, policy briefs and participation in policy- making bodies. As far as professional publications are concerned, the record of the faculty has been very satisfactory. In the year under review, the faculty published 10 books, 33 papers in peer-reviewed journals, 14 papers in other journals, 29 papers in edited books, and 12 working papers. In terms of quantity, the position has remained fairly stable during the last few years but a major challenge is improving the profile of publications that accept our work. There is a definite need to augment the number of papers published by the faculty in the top-ranking journals. During the year, 15 faculty members took part in 51 international conferences, and 19 in 87 national conferences, most of them presenting papers. Their participation in academic and policy-making bodies outside the CDS has also been satisfactory. Two areas that need to be improved on is the dissemination of information through policy briefs, and writing in popular magazines and journals. We have been looking into ways of improving the scope, content and presentation of the CDS website and the house magazine, CDS Chronicle.

To encourage publication in international journals, a decision has been taken to reimburse scholars the submission fee they pay. The faculty has recently decided to publish two international journals -- Journal of International Migration and Journal of Innovation and Development -- in partnership with Routledge, a reputed publishing house.

Teaching Programmes

The MPhil/PhD programmes were begun in 1975 with affiliation to Jawaharlal Nehru University (JNU), New Delhi. The University of Kerala has recognised the CDS as a centre for its doctoral studies. The annual intake in recent years has been 18 students for MPhil and 7 to 9 for PhD. These programmes are periodically reviewed and appropriate modifications made to incorporate recent contributions to economic theory, methods and empirical verification.

In recent years, it was felt that students joining the MPhil programme were not up to the mark and unable to cope with the revised curriculum. A critical factor is the lack of quality training in economics and mathematics both at the undergraduate and graduate levels at most Universities. We sought to remedy this problem by offering foundation courses in economics and mathematics to MPhil students. But this did not produce the desired results. So, much of the teaching that we do at the MPhil level now turns out to be remedial, compensating for the poor quality of instruction at the lower levels. If students are properly taught the basic principles of modern economics and econometrics, alongside a few specialised courses in categories such as public economics, gender and development, environmental economics and so on, at the Master’s level, their training in analytical research at the MPhil and PhD levels will be more attractive and rewarding to them and society.

It was also noted that the MPhil programme is loosing its attraction for several reasons. These days, admission to PhD programmes in most Universities in India is based on a
Master’s degree with high percentage of marks and a Junior Research Fellowship (JRF) award of University Grants Commission (UGC). Many good students are likely to qualify for the JRF and enter doctoral programmes directly.

In India, very few institutes excel in both research and teaching. It may be useful to combine Master’s-level teaching and research at the CDS campus with teaching carried out by researchers-cum-teachers. These instructors will not only be well versed in the latest theoretical and empirical developments in their disciplines but also be using this knowledge base to provide opportunities for students to pursue MPhil and doctoral programmes at the CDS. Added reasons for having a master’s programme is the low level of utilisation of library and computing facilities at present, and the enthusiasm among the faculty to share the additional teaching load.

It was also noted that the submission rate in the PhD programme has been low in recent years. Though, we have, made some efforts to restructure the PhD programme, it has not had the expected outcome. We plan to review the programme to chalk out measures to speed up the submission rate.

In addition to the MPhil and PhD programmes, the CDS contributes to improving higher education in the country by organising short-term training programmes for the College/University teachers and researchers on the frontiers of development studies.

Faculty and Supporting Staff

Several members of the senior faculty will be retiring in the next two to three years. The same is the situation with the supporting staff. A number of steps have been initiated to fill in the faculty and staff positions, taking into account the required qualifications and the budget.

The procedures for recruiting faculty members have been reviewed from time to time. Given the difficulties in getting well-qualified, full-time teaching staff, it has been decided to also extend the search to visiting and adjunct faculty members, who will be employed on flexible terms and conditions. The faculty recruitment procedure has been streamlined. Apart from assessment of academic and research publications through refereeing, it now involves a seminar presentation, followed by an interview. In the last three years, we have succeeded in adding seven young members to the faculty. The initial appointment is for three years, at the end of which performances are assessed by a committee. The candidates are made (or not made) regular employees on the basis of the committee’s recommendation.

A scheme for regular faculty assessment is now in place. There are two components to it. The first is a modified scheme designed by the UGC. The second, more constructive one, involves submitting self-assessment reports and important copies of publications. These are reviewed by an external expert. Each member of the faculty also presents his or her work in a workshop attended by all the faculty and experts. Comments and suggestions are frankly made by the specialists. A confidential report on the performance of the faculty member is prepared by an assessment committee constituted for the purpose. This exercise is to be carried out once in every three years.

The CDS has assessed the duties done by the supporting staff and on the basis of this, calculated the requirement of personnel in various departments for the next 15 years. It has also proposed a scheme for restructuring the staffing pattern. Since two-thirds of the supporting staff will be retiring by 2113, this is also an area that requires urgent attention.

Infrastructure and Finance

The construction of a four-storey building for the Library was completed during the year. The Library now has two interconnected buildings, comprising a total of 11 floors with an area of more than over 28,000 square feet, adequate to meet its future expansion plans. The ground floor of the old Library building has been renovated to accommodate a reception counter and some sections of books. One of the rooms on this floor is being converted into an air-conditioned board room. With the extension of the Guest House completed, there are 14 rooms available
for guests, four of them air-conditioned. The construction of a new kitchen with modern equipment and fittings is in progress. A 16-KVA power generator has been commissioned to ensure uninterrupted power supply in the event of power failures during academic events.

The computing facilities on the campus are now at an advanced technological level. The old monitors of desktop computers are being replaced with higher configuration LCD ones. A plan for a Central Storage based on Storage Area Network (SAN) technology has been finalised. Once commissioned, a portion of it will be allocated to users and each user will get a specified quota of disk space to store his or her files. Another new service being introduced is the Virtual Private Network (VPN) that will allow users to access CDS local area network (LAN) services (like online library catalogues) from anywhere. A proposal to set up wireless LAN on the campus has also been worked out. The Library has completed bar-coding a major portion of its books and back volumes of journals, and their bibliographic records have been entered in the Libsys program. A separate Documentation Centre to serve the needs of scholars researching local self-governments has been set up. The Library has digitised 260 working papers of the Centre and uploaded them on the CDS website.

During the reporting period, the financial position of the centre continued to be more or less stable. The expenditure stood at Rs. 365.56 lakh compared to Rs. 334.44 lakh during the previous year, an increase of 9.3%. The increase was due to payment of salary and dearness allowance arrears to employees, a revision in electricity charges, and an increase in the expenditure on travel and subscription of periodicals. Under all other heads, expenditure was less or almost static.

The Indian Council of Social Science Research (ICSSR) provided a grant-in-aid of Rs. 142.00 lakh, compared to Rs. 133.00 lakh provided during 2007-08, an increase of Rs. 9.00 lakh. The Government of Kerala revised the plan grant from Rs. 50 lakh to Rs. 100 lakh to support the expansion of infrastructure facilities and thus, the total grant-in-aid released by the Government stood at Rs. 195.11 lakh, compared to Rs.136.47 lakh in 2007-08. The CDS acquired assets worth Rs. 213.74 lakh, of which those worth Rs. 29.98 lakh were acquired utilising the grant-in-aid. The actual value of CDS endowment and other endowments earmarked for specific purposes grew from Rs. 25.34 crore in 2007-08 to Rs. 26.68 crore in 2008-09.

The Governing Body held its annual meeting on 9th September 2008. The Finance Committee met once and the Committee of Direction twice during the year. All the internal committees, such as the faculty committee, academic committee, committees constituted for the teaching programmes, and others set up for the smooth functioning of the Centre, have been quite active.

**Concluding Remarks**

In recent years we have been reflecting on, and rethinking, the strategies and programmes needed to position the CDS as an essential entity in a time of national, regional, and global change. In particular, reorienting our research, teaching and training programmes, modernising the infrastructure, and improving the Centre’s financial status have been our main concerns. Our relations with the Government of Kerala, the ICSSR, JNU and several national and international organisations continue to be excellent and we hope that all of them will continue to support us, standing by us in our journey along the road to further progress.
INTRODUCTION

This chapter provides a review of the research studies that were completed and were in progress during the academic year 2008-09. Organising the studies, we have grouped them into the following thematic areas: (1) Macro perspectives, globalisation and development; (2) Agriculture, rural economy and decentralisation; (3) Industry, innovation and infrastructure; (4) Human development, health and education; (5) Migration; (6) Employment and social security; (7) Gender and women studies; and (8) Other studies. The list of studies and projects with details like research names, date of commencement and completion, sponsoring agency and so on are provided in Appendix I. Apart from research done by the faculty, the review also contains some of the work done by doctoral students.

1. MACRO PERSPECTIVES, GLOBALISATION AND DEVELOPMENT

Studies in this group cover a range of issues such as the behaviour of the exchange rate; the exchange rate and exports; inflation and its regional dimensions; the impact of the global financial crisis on the economy; the growth of the service sector; and theoretical concerns in macro economics.

A research project (No. 1) examined the behaviour of the rupee-US dollar exchange rate against the background of ample and increasing capital inflows to India in the post-reform period. The study used monthly data and estimated a model in a time-series framework to assess the relative significance of capital inflows in the context of interest, inflation, and growth rate differentials and other factors. It concluded that foreign institutional investment was the dominant factor affecting the rupee-dollar exchange rate. Another paper (No. 2) in this area analysed the effect of the exchange rate on the exports of textiles and clothing. It
found that the exchange rate had an effect on such exports, with an inverse relationship in some cases.

An examination of regional variations in the inflation rate (No. 3) observed that liberalisation had led to a decline in the rate of inflation by all measures but there were differences across States. The contrast in the extent of competition across States may have been the reason for this. The paper pointed to the need for a deeper analysis of aspects such as institutional factors, infrastructure, differential tax policies, and producer state vs. consumer state. Another study on inflation (No. 4) argued that the prices of manufactures came down sharply during the liberalisation period, suggesting that market forces operated more effectively in this sector than the primary and tertiary sectors. The paper also noted that the Consumer Price Index (CPI) for industrial workers had declined the least compared to the other CPI indices, which demanded a detailed analysis.

An important study (No. 5) was on the impact of the global financial crisis on Kerala’s economy. It took the view that Kerala was more vulnerable to the financial crisis than other States because of its greater integration with the world. Given the specificities of the State, the report identified five channels -- remittances, exports, credit, tourism, and the prices of intermediate inputs -- and discussed the possible impact on the State’s economy under each of them. It also examined the implications of the crisis on Net State Domestic Product (NSDP) growth and government finance. The report suggested a number of mitigation measures, including streamlining the government and administrative machinery to effectively handle such crises in the future, strengthening the social safety net to minimise the impact on vulnerable people, and a number of steps to revitalise the State’s economy.

An ongoing study, entitled ‘Monetary Policy and Construction Sector Activities: An Indian Perspective (No. 6)’, examines the impact of monetary policy and other macro economic factors on the growth of the construction sector and on housing prices. It analyses the demand and supply factors affecting the construction sector, and discusses the role of monetary policy in terms of availability of bank credit and interest rates. A related study (No. 7) examined the key macro economic factors determining housing prices in India, using both macro and micro-level information.

A deliberation (No. 8) on the importance of home markets in boosting economic growth noted that in the mid-1960s India had experienced a demand problem in both the agricultural and industrial sectors. It argued that the domestic market was of great importance in a large country like India, and sustained industrialisation could only be based on its growth. However, the growth of home markets in an open economy like India still faced constraints because demand had to largely come from the poor, who lacked purchasing power. There was a related study that examined the relationship between macro economic fluctuations and agricultural prices. Another inquiry (No. 9) looked into the growth of the service sector in India and the job opportunities provided by it, focusing on the quality of employment.

A paper on various schools of macro economics (No. 10) argued that there was now only a “thesis-antithesis” process of antagonistic contradiction in the development of macro-economic thought, without the advantage of a full dialectics, blooming in a historically staged synthesis. These antagonistic forces appear in the guises of neo-classical vs. Keynesian, Keynesian vs. monetarists, and new classical vs. new Keynesian. The contention was that this antagonistic contradiction essentially emanated from the classical ideological difference between physiocrats and mercantilists: old wine in newer bottles.

The study ‘In Quest of Truth: The War of Methods in Economics (No. 11)’ discussed the “battle of methods” in economics in its epistemic pursuit within the framework of a dialectics between science and art. It outlined recent trends in econometrics and experimental economics in the context of this pursuit. The paper reiterated the contemporary consensus on the complementary roles of the two approaches: a theory-data confluence, not in a static, but a dialectical framework.
2. AGRICULTURE, RURAL ECONOMY, AND LOCAL GOVERNMENTS

There are four streams of research under this head -- rural livelihoods; the impact of the financial crisis on the rural economy; research on the plantation sector; and local governments and decentralisation.

**Rural Livelihoods**

A study entitled ‘Peasant Classes Under Neo-liberalism: A Class Analysis of Two States (No. 12)’ pointed out that Indian agriculture had been stagnant for more than a decade. Farm indebtedness had escalated following a steady decline in real product prices. At the same time, the gradual withdrawal of formal credit institutions from rural areas had led to the increasing dominance of private players in the credit market, rendering primary commodity producers all the more vulnerable. A class analysis of household-level farm production data from two States revealed the pattern of income distribution and rising indebtedness in rural areas. The paper noted that effective price stabilisation measures and a short-term but comprehensive debt-relief policy were called for.

A research project is on to analyse rural livelihood strategies (No. 13). Following economic liberalisation, the country has witnessed rapid economic growth, especially since 2000. However, this high growth has been dichotomous in nature. There has been phenomenally high growth in the service sector while the agricultural sector, which employs the largest proportion of the workforce, has been stagnant. This has depressed incomes in the primary sector and led to a shift of the workforce, mainly to informal, non-agricultural activities. The diversification of livelihoods can be seen as coping strategies of households and individuals primarily engaged in low-growth economic activities. Rural livelihoods and their transformation, which have larger economic and social implications, constitute a crucial area of study. An important aspect of livelihood diversification is the role of macro-level public policies and the range of institutions functioning in the economy. The economic relations of households/individuals with different public and other institutions and the shaping of such relations by public policies determine the nature of the transformation process and its consequent outcomes.

Another study (No. 14) examined the impact of zoning, which prohibits fishing by mechanised boats in inshore waters and during monsoons, in Kerala. The study presented a theoretical analysis of the measure and analysed the available data to gauge its impact on fisheries. It found that zoning has had a positive impact on resource distribution patterns, but that it would only be a short-term solution if the larger problems in the sector were not addressed.

**Impact of the Financial Crisis on the Rural Economy**

An analysis of the implications of the financial crisis for the rural economy (No. 15) pointed out that it could have direct and indirect consequences. A major direct impact could be a fall in the world demand and the prices of primary agricultural products that are cultivated for export. Another direct impact could be a squeeze on credit to small-scale agriculturists and other rural producers. An indirect consequence could follow from the slowdown in the secondary and tertiary sectors. The agrarian crisis in the last decade resulted in a shift towards non-farm employment, particularly self-employment in the informal sector. That the present crisis could decelerate the manufacturing and services sectors implied that occupational diversification, even if on unfavourable terms, would be more difficult. The financial crisis, therefore, threatened to intensify the income deflation that was already a feature of the rural economy and aggravate the levels of hunger and malnutrition in the countryside.

There was also a paper reviewing the major issues surrounding the global food crisis (No. 16). The phenomenal surge in fuel and food prices, followed by the ongoing economic crisis, had increasingly deprived the poor across the world, particularly in the South, of their fundamental right to food. The magnitude of the food crisis demanded urgent action by governments, multilateral agencies and all...
those who cherish the vision of a hunger-free world. An identification of the causes of the food crisis and rising hunger was crucial if policies and strategies were to be adapted to face this critical situation. Looking at the issue in a historical time-frame, one cannot help conclude that a review of the trade policies of developing countries and their export-oriented agricultural production is called for. In addition, making structural changes to their food stock policies and public distribution mechanisms could also be necessary.

National Research Programme on Plantation Development (NRPPD)

The plantation sector in India (No. 17) has been facing several challenges in recent years. It has been losing out in external markets and faces competition from imports in the domestic market. Its international competitiveness has eroded because of low productivity, an inadequate processing and marketing infrastructure, and a low level of value addition. Greater integration with the world market has also meant a decline and volatility in prices, which in turn have inhibited investment, as noted by the Taskforce on Plantation Sector. It is estimated that the plantation sector accounts for about 5% of the net sown area, contributes to about 10% of the income from agriculture and provides about 13% of agricultural exports. The estate sector alone employs nearly 2.5 million people, mostly women, while the presence of small holders is increasing. Evolving a long-term perspective for the plantation sector involves understanding the multifarious issues that are specific to it as a whole as well as crop-specific, and certain other issues that have national and international dimensions. Yet, the current state of research for informed policy-making is grossly inadequate. With a view to promoting policy-oriented research on all aspects of the plantation sector and help capacity building, a one-time grant of Rs. 500.00 lakh was granted to the Centre by the Ministry of Commerce, Government of India to set up a Research Unit to launch a national research programme on Plantation Development at the CDS.

Research under the programme was initiated towards the end of the reporting year. Various issues related to production, post-harvest operations, processing, marketing and prices, exports and the World Trade Organisation (WTO), labour and employment, environment, agricultural research, extension and diffusion of innovation, and taxation and financing plantation development will be subjects for research in 2009-10.

Local Governance and Decentralisation

A study was conducted to analyse the implementation of e-governance in local self-government institutions in Kerala (No. 18). As of January 2009, around 92% of the panchayats in the sample had at least one software program installed and used it to some extent. Only 42% of them thought they had enough computers. Around one-fourth had no computer on the table of any regular employee. Less than 5% of them reported that more than three-fourths of their employees had been trained. Nearly 40% had trained half their employees, and another 40% one-fourth. To estimate the impact of computerisation on delivering services, we enquired about the time it took to issue birth or death certificates. Of the sample, 43% claimed to issue these certificates in a day. About 37% took two to three days and the remaining needed even more time. Logistic regression indicated that the availability of the sevana registration program (after controlling for other relevant variables) significantly reduced the time required to issue such certificates. However, the number of days actually taken was beyond what was necessary with the ideal use of the software. According to the local governments, there was a demand for computerisation among both citizens and elected representatives. But indirect evidence (or their revealed preference) indicated a different situation. A high number of elected representatives, 87%, said citizens approached them for speeding up services from their local governments, and in most cases they could help them. About 70% believed that people remembered such help provided by them. So only less than half the representatives thought that people should approach panchayat offices directly.
instead of coming to them. This may be an indirect indication of the not-so-strong demand for better e-governance in local governments.

The study also examined how far citizens’ charters served as an instrument of public accountability. Nearly 97% of the panchayats in Kerala had prepared citizens’ charters but only 46% of the citizens had heard about them and only 42% knew that one existed in their panchayat. Not surprisingly, only 12% said they knew the time for each service was prescribed in the citizens’ charter. But not all were willing to complain if a service was not delivered in the time mentioned in the charter, according to the survey. The regression results indicated that the poor and less educated as well as those in localities dominated by strong vote banks were less inclined to complain. Since a large number of local government programmes were aimed at social security and poverty eradication, most of the beneficiaries were uneducated, and thus ill equipped to use the provisions of citizens’ charters. This too can be seen as an indirect indication of the unwillingness of citizens to make an effort to improve governance.

Another project in three grama panchayats in Kerala assessed the impact of National Rural Employment Guarantee Scheme (NREGS) on employment generation and the incomes of worker households. While worker registration was appreciably high, the demand for jobs had dropped in all three. In 2007-08, less than 40% of the card-holding households demanded jobs. Except in one grama panchayat, there was a further decline in 2008-09. Women in the general category constituted the major beneficiaries of the NREGS. But projects were generally taken up without considering the need to create durable assets and conserve natural resources. There was also a lack of integration with other government schemes and panchayat plans. The scheme was successful in raising the level of employment and income of rural households, thereby enhancing their purchasing power. It also substantially increased their creditworthiness and while working in groups socially empowered women. In some cases, it was noted that agricultural work and NREGS projects were on at the same time, which resulted in a deficit of labour in the agricultural sector. A study of the public assets created as part of decentralisation was also conducted by the Research Unit on Local Self Governments (RULSG), CDS, in the three grama panchayats.

An ongoing research project addresses the question (No. 19) whether participatory initiatives in local governance enhance poor people’s opportunities for political empowerment. It looks at three related aspects of empowerment—poor people’s political capabilities, their political space, and their substantive citizenship. Based on a comparison of the situations in West Bengal and Kerala, this is a collaborative project among the Centre for Studies in Social Sciences, Kolkata, University of Sheffield, U.K., and the CDS.
3. INDUSTRY, INNOVATION AND INFRASTRUCTURE

In this broad topic, the studies are classified under the heads of innovation; electricity; information technology; trade and industry; and other studies on industry.

Innovation

An inquiry into the growth of knowledge-intensive entrepreneurship in India (No. 20) observed that the number of knowledge-intensive firms had been increasing over time. Almost all the entrepreneurial firms in the country in technology-intensive industries, mostly in the service sector, were promoted by trained entrepreneurs. These entrepreneurial firms were highly integrated with the global economy and were successful in coming up with useful innovations. The study held that venture capital institutions had played an important role in nurturing technology-based entrepreneurship. Another contributory factor had been the availability of technically trained personnel. A separate paper (No. 21) examined how effective tax incentives had been in encouraging investment in research and development (R&D). It found that R&D expenditure had shown very few signs of being responsive to tax subsidies.

A study (No. 22) explored the possibility of linking innovation system research and development studies to enable us to explain dynamism or the lack of it in a developing country as well as to design public policy for innovation. An allied paper (No. 23), which serves as the introduction to Handbook of Innovation Systems and Developing Countries, also discussed issues related to development and innovation systems.

An ongoing project (No. 24) argues that the present concept of an innovation system is based almost entirely on the development experience of advanced countries. The institutional context and nature of innovations are significantly different in developing countries. The paper attempts to evolve a conceptual framework for a Southern innovation system, which will be able to analyse the process of innovation and its underlying factors in developing countries. Another study (No. 25) on industry-academia interaction said that most of the studies analysing the subject had so far examined the experience of the developed world. In developing countries, these processes may work differently. The paper empirically examined the extent of university/public research institutes interaction with industry in India. A related analysis (No. 26) looked into issues such as the current policy environment and institutional arrangements facilitating university-industry interaction, and their different forms and content. Their variation across industries with a varying scientific base and across firms of varying size operating in different organisational and market structures was also studied.

A study in progress, entitled “Innovation Systems for Inclusive Development: Lessons from Rural China and India” (No. 27), addresses the significance of agricultural development and rural industrialisation in ensuring sustainable and harmonious development in the two countries. It will give due weight to the fact that both China and India have the highest proportion of population dependent on agriculture and rural micro and small manufacturing enterprises for its livelihood. In another ongoing study (No. 28), ‘Globalisation of Innovation: Its Manifestation, Determinants, and Implications for the Emerging Economies of China and India,’ the aim is to critically examine the factors that make China and India favourite locations for R&D outsourcing. It analyses the impact of this activity on the overall economic performance of both the economies, specifically its role in accelerating the process of local technological development. Yet another ongoing project (No. 29) analyses the transition of global production networks to global knowledge and innovation networks and the capacity of emerging countries to participate in them. It also looks at global innovation networks, the dynamic impact moving knowledge-intensive activities overseas has on firms and evaluates the long-run costs and benefits of emerging global innovation networks in a range of industries.

Scrutinising the evolution of telecommunication equipment manufacturing industry in four countries -- Brazil, China, India and Korea -- a paper (No. 30) argued that though all
had crafted a state-led sectoral system of innovation, two divergent paths emerged. At one end of the spectrum, the Chinese and Korean systems succeeded in coping with the challenges posed by globalisation and emerged as major exporters of telecom equipment. At the other end, Brazil and India turned into net importers of telecom equipment. The paper explained the phenomenon using the theoretical framework of the sectoral system of innovation.

Electricity

‘Forecasting Demand for Electricity: Some Methodological Issues and an Analysis (No. 31)’ pointed out that the continuing “energy crisis” had made it crucial to accurately project the demand for electricity. After critically evaluating various electricity demand forecasting methodologies, it proposed a procedure in the classical time series framework. A work on power sector reforms by the same scholar (No. 32) contended that the problems confronting the State Electricity Boards (SEBs) in India were internal to them. So what the system required was not a market-oriented restructuring, but an essence-specific reform that removed impediments in the way of improved performance. In this light, the paper proposed some viable reforms the power sector in Kerala could adopt. A companion piece by the same scholar drew some lessons from actual experiences of power sector reforms.

Information Technology (IT)

The determinants of investment in IT in the Indian manufacturing sector (No. 33) formed the subject of enquiry in one of the studies in this category. The factors considered included performance in the output market, the relative price of other inputs, inter-industry variations in skill intensity, the relative price movement of IT capital, degree of vertical integration, total factor productivity, capital intensity and the average size of firms. Coming to the Information Technology Agreement (ITA) of the WTO, a study (No. 34) called attention to the fact that the remarkable performance of the IT software and service sectors in India had coincided with a downturn in its hardware sector. It was believed that India’s participation in the ITA would help augment the production base for IT goods and help address the various demand side issues that stood in the way of IT diffusion. The paper explored the extent to which the ITA had helped India and found that tariff reduction and import competition had not halted the downward trend in IT hardware production. The increase in domestic demand appeared to be increasingly met by imports. Another study (No. 35) made an attempt to situate the role of information and communication technology in the development discourse on Kerala, setting it against the background of globalisation and knowledge-based growth in the State’s economy.

Trade and Industry

A discussion on productivity growth in a liberalising economy (No. 36) focused on two avenues of growth -- resource reallocation and catching up. Using firm-level panel data for the period 1992-93 to 2005-06, the study showed that productivity growth due to the reallocation of resources was not only significant but also increasing in a majority of industries. The paper also found that reallocation to exporting firms increased aggregate industrial productivity. In most of the industries engaged in the catching-up process, there was a convergence in productivity, particularly during the second half of the study period. Investigating the effect of international trade on R&D investment (No. 37), an analysis showed that exports in general encouraged investment in innovation while competition from imports promoted such investment only when the domestic market was highly concentrated. Otherwise it had a negative effect, thus revealing the conditional nature of the impact of international trade on funds committed to R&D. Taking the dramatic changes in the industrial and trade policy regimes into account, another study (No. 38) examined the factors that determined the technology strategies of firms in Indian manufacturing industry. A different paper in this area (No. 39) explored the effect of openness in trade on the structure of Indian manufacturing industry and its implications for technological progress and employment. It indicated that trade had a restrictive effect on the shares of growth-
Other Studies on Industry

Examining competition as a multi-dimensional process (No. 40) within the framework of the industrial organisation theory, an empirical analysis took firm-level data on 14 industries from 1988-89 to 2000-01 as its basis. It showed that the most competitive industries were metal products, drugs and pharmaceuticals, and electronics and the least were cotton textiles, non-electrical machinery, synthetic textiles, and transport equipment. The positive relationship between competition and growth rate suggested that enhancing competition was a prerequisite for accelerating industrial growth. Another inquiry (No. 41) examined the extent to which competition in Indian manufacturing industry tended to focus on dominant firm behaviour. A related paper (No. 42) probed whether the process of mergers and acquisitions in the pharmaceutical industry had contributed to changes in its level of concentration. Using an exclusive database on the processes, it found that mergers and acquisitions had played a major role in changing the industry’s market structure.

Using Prowess data in the context of financial liberalisation policies, another project (No. 43) examined the financing patterns of Indian industries from 1990 to 2006. The so-called pecking order theorem was found to be not applicable to many major Indian industries although there was a trend towards it. It concluded that although the development of the stock market had been expected to lower the cost of capital for Indian corporations, it had not played a major role as far as actual resource mobilisation was concerned. An associated study (No. 44) by the same scholar investigated the sources of financing for Cross Broader Mergers and Acquisitions (CBM&As) by Indian firms. A detailed case-study approach was used toanalyse the overall financing pattern of Indian firms acquiring foreign firms located abroad. An allied analysis (No. 45) looked into the efficiency of investment allocation in Indian manufacturing industry against the background of liberalisation of the financial sector, a measure that was expected to improve allocative efficiency.

Another paper (No. 46) examined the factors determining export of textiles and clothing (T&C) after the WTO’s Agreement on Textile and Clothing (ATC) came into effect. Empirical analysis, using Tobit models, revealed that exports by firms with low-cost labour showed an increase following implementation of the ATC. Capital and technology-based factors had a negative effect on exports, endorsing the view that Indian T&C firms by and large utilised the low road to competitiveness. The importance of import intensity in export performance also suggested that Indian T&C was becoming increasingly integrated in the global value chain.

4. HUMAN DEVELOPMENT, HEALTH, AND EDUCATION

A focus on population, health and human development has been central to research at the CDS since its inception. During the past year, research on these themes concentrated on four areas -- human development issues at the micro level; maternal and child health; health-care financing and utilisation; and ageing and development. And under education, it looked into school education with an emphasis on Kerala; and higher education.

Human Development Issues at the Micro Level

The CDS prepared the Kerala Human Development Report 2005 (KHDR 2005), which was very well received by policymakers and researchers (No. 47). As a follow-up to it, the Kerala State Planning Board, under a United Nations Development Programme (UNDP) project on ‘Strengthening State Plans for Human Development’, entrusted the task of preparing Human Development Reports (HDRs) for two districts (Kottayam and Wayanad) and two gram panchayats (Kottathara in Wayanad district and Madappally in Kottayam district) to the CDS. These HDRs are expected to facilitate evidence-based planning to address inequality across social groups, identify pockets of deprivation and accelerate the progress of human development activities.
During the reporting year, the Kottathara Panchayat Human Development Report (No. 48) was completed and submitted to the State Planning Board. This report attempts to move forward from the KHDR 2005 observation that differences in deprivation among districts in Kerala are more due to social than regional characteristics. The multi-caste/religious Kottathara panchayat was selected for this exercise because it represents a true microcosm of rural Kerala. The report acknowledges that while Kottathara is almost entirely dependent on land and agriculture, the economy of Kerala as a whole is dominated by the service sector and remittances. The first of its kind in India, the report, which highlights the factors that have contributed to successes and failures in human development in the Panchayat, is expected to provide important inputs to planners and policymakers. The report points out that skewed distribution of land and landlessness among certain social groups, for instance, Paniyas, low agricultural yields and poor prices of agricultural commodities in recent years have led to the persistence of poverty in the Panchayat. Difficult access and social distance have denied educational opportunities and better health to a wide section of the population. The report recommends providing a better infrastructure for education and health-care development, which could have a positive effect on eradicating poverty. It also says that the existing gap between the functioning of State government departments and the Panchayat needs to be bridged for better implementation of development projects and to tap growth opportunities in the service sector, like tourism. In addition, it urges the Panchayat Board to come up with a perspective plan for agriculture and NREGS works instead of viewing them as mere employment schemes. The report stresses that the local government should pay attention to educational development of the Paniya community and other poor social groups so that they will acquire the ability to fend for themselves.

During the reporting year, the CDS translated the KHDR 2005 into Malayalam for wider dissemination of its findings at the local level and it was submitted to the State Planning Board. The Kottayam and Wayanad district reports and the Madappally Panchayat Report are expected to be completed by December 2009.

Maternal and Child Health

Maternal and child health issues occupy a significant space in research at the CDS. Many of the studies during 2008-09 paid attention to the socio-economic determinants of child and maternal health in India using data from the National Family Health Survey-3 (NFHS-3). ‘Health Inequality in India: Evidence from NFHS-3 (No. 49)’ presented an empirical assessment of income-related health inequality in India. This study found that poorer sections of the population are beleaguered by problems to do with child survival or child nutrition. It revealed that health inequalities escalated when rising average income levels of the population were accompanied by rising income inequalities. The study said that the poor sections had different needs and effective planning and intervention necessitated understanding the sources of inequality and recognising who the vulnerable groups were.

A study entitled ‘Socioeconomic Inequalities in Child Health: Recent Evidence from India (No. 50)” described certain broad features of child health inequalities and their distribution across socio-economic groups, classified by gender, sector of origin and dispersal across space. It found that child health inequalities with respect to gender and
sector of origin were persistent, irrespective of the development status of a State. This should not only help policy-makers recognise persistent inequalities but also help them understand health performance at the State and regional levels, thus facilitating intervention where it is needed. Another inquiry examined inequalities in child malnutrition in India (No. 51) through three types of empirical analysis. First, it reported the socio-economic inequalities in childhood malnutrition across different Indian States. Second, it examined the gulf in malnutrition between children from poor and non-poor households to understand the unequal distribution of health determinants and their effects. Third, it looked into inter-group disparities in child malnutrition and noted that child groups privileged in terms of income, mother’s nutritional status and education had lower malnutrition. The paper concluded that policies to reduce malnutrition inequalities should recognise that endowment revisions would be more effective if they were combined with behavioural intervention.

An analysis using NFHS-3 data, ‘Social Infrastructure and Women’s Undernutrition in India (No. 52)’, examined the role proper social infrastructure, such as access to toilet facilities, drinking water on the premises and clean cooking fuels, could play in reducing undernutrition among women in India. It brought out that undernutrition was very widespread among women who lacked access to these three facilities. This lack of access, essentially part of the poverty syndrome, alluded to the fact that poverty can blight women’s well-being, and by extension, that of the whole family. This study was part of a larger ongoing study on patterns and determinants of maternal nutrition in India (No. 53).

Another work critically looked at the wealth quintile distribution derived from NFHS-3 data (No. 54). It cautioned NFHS-3 data users who make use of wealth index scores against computing quintiles for the population they wish to stratify according to economic status. It was emphasised that while the wealth score was a household attribute, its quintile distribution had to be in accordance with the population and the relevant indicator that one wished to stratify in terms of this wealth score. Any analysis based on the wealth quintile grouping in NFHS-3 data not only came to the wrong conclusion on wealth inequality but also provided misleading wealth-related inequalities in demographic and health outcomes. It concluded that the disaggregation according to wealth quintiles presented in NFHS-3 did not represent a true picture of wealth disparity as it ignored the inherent divide across States and rural-urban differences.

An ongoing study attempts to comprehend health inequities in selected health indicators of some other Asian and African countries (No. 55) using data from Demographic Health Surveys (DHS). Given the common format in which the DHS project collects information, a comparison of the magnitude of health inequity across Egypt, Jordan, Morocco, Pakistan, Sudan, Tunisia and Yemen, based on three different measures, is possible. The health indicators being examined relate to maternal and child health. The inequities are relatively higher in maternal health than in child health and the characteristics associated with higher inequities are maternal education and location. Among the selected countries, Egypt and Jordan seem to fare better than the others.

**Health Care Financing and Utilisation**

‘Healthcare Payments in India: Its Catastrophic and Inequity Implications (No. 56)’ suggested that about 10% of the households in rural and urban India spend up to 15% per cent of their total consumption expenditure on health care. This varied across States, ranging between 1% and 20%, with the rich spending more than the poor. Further, the same phenomenon was investigated in terms of its intensity. The poverty impact was assessed by comparing the pre and post-health care payment scenarios and it revealed different impacts across States, the severity being more in rural than urban areas. Finally, the progressiveness in health-care payments was affirmed in the Indian context with a few exceptions such as Haryana and Kerala. The redistributive index also indicated the positive role of health-care payments in reducing inequality. It was argued that such patterns were largely because of the lack of health-care facilities, especially in rural areas, and the inability of the poorer sections to spend on health.
A study, ‘Consumption of Inpatient Care Services from Private Hospitals: Trends Emerging from Kerala (No. 57)’, examined the evolution of private hospitals between 1986 and 2004 in terms of their services and equitable reach. The analysis revealed that improvements in the purchasing power of the population and the strategy of private hospitals offering different pricing options to generate revenue from the poorer sections had reduced the rich-poor divide in this sector in recent years. Though the quantum of utilisation of inpatient services in private hospitals among the poor was close to that of the rich, it taxed them more heavily.

A research project entitled ‘Access to Health Care and Basic Minimum Services in Kerala (No 58)’, sponsored by the International Development Research Centre (IDRC), Canada, was completed during the year. This was the second phase of a project focusing on access to basic services in Kerala. The objectives of it included consolidating the scientific assets from Phase I by exploiting its databases to the fullest and disseminating them among a wide audience. Besides, it aimed to analyse the implementation and the outcomes of community-based health insurance as well as the impact of micro-credit schemes on women’s health, and collect more evidence on health and health needs, especially among the Paniya tribes. Strengthening existing ties with the local government, network of women’s self-help groups and non-governmental organisations (NGOs) also figured on its agenda.

‘Assessing Fairness in Financing Outpatient Care in India’ (No. 59), an ongoing study, attempts to revise the World Health Organisation’s index of Fairness in Financial Contribution (FFC) by addressing its major limitation of insensitiveness to progressivity. In the revised index, an element of progressivity is introduced in place of the equal burden principle. An empirical illustration of the index, using data on India’s outpatient health-care expenditure, shows that it is sensitive to catastrophic outcomes and provides valuable insight about the performance of the health system. It is also associated with the major indicators of health outcome as well as statistics on health-care facilities.

Ageing and Development

The year saw the completion of ‘Age Structural Transitions, Human Capital and Economic Growth in India (No. 60)’, which discussed the opportunities and challenges of Age Structural Transition (AST). It argued that if India exploited its window of opportunity, there was great potential for a dividend in terms of increased savings and investment for economic growth. ASTs were under way though their timing and pace varied across the States. The southern States were about to move out of the window of opportunity whereas the northern States were just entering it. The relatively rapid growth of the labour force would benefit India if employment opportunities were increased with sufficient speed to match it. The current labour force was dominated by those with secondary school qualifications and they experienced high unemployment. Productively employing this segment would be a challenge while the differentials in ASTs among States in India could encourage large-scale internal migration.

Highlighting that India is the second largest country in terms of the number of elderly, a study examined issues related to demographic aging and employment in India (No. 61). On an average, an elderly person is expected to live between 18 and 20 years after the age of 60. Around 33.1% of the elderly in India lived without their life partners. Widowers among old men were 14.9% and widows among old women
were 50.1%. A major social security programme to protect elderly females, particularly widows, was needed because they were much more vulnerable than old widowers, the study said. Labour force participation among the elderly in India was about 41.3%; 60.3% among males and 20.9% among females, according to the 2001 census. The striking aspect of the employment status of the elderly in India was that the vast majority of them was self-employed, followed by casual labour. Very few had regular jobs. The paper emphasised that trends in work participation rates had to be viewed in the context of poverty and inadequate social security systems. In India, 27.5% of households lived below the poverty line and households with the elderly reported slightly lower estimates of income than non-elderly households. Similarly, 58% of females and 45% of males were totally dependent on their children and grandchildren in rural areas compared to 64% and 45% in urban areas. In 2006, about 13% of elderly were covered by the formal pension system—from 19% in Kerala to 11% in Rajasthan. On the other hand, 15.7 million people above 65 years were covered by the National Old Age Pension scheme which provides Rs. 200 a month to those below the poverty line. The mandatory retirement age in India in the formal (both government and private) sector varied between 55 to 65 years. The paper recommended that India should work on a universal mandatory retirement age and more research should be done on why older workers were not preferred in some occupations. Another area requiring more research, according to it, was the assessment of the productivity of workers by age and improvement of their skills through life-long learning programmes. Since the elderly in the informal sector continued to work until their final days in spite of serious health problems, it held that the government should extend the National Old Age Pension to all formal workers, irrespective of poverty status, and introduce universal health insurance for all the elderly. The study’s revised estimates of elderly work participation rates indicated that elderly women work more than elderly men and it suggested that more research was needed on women’s invisible participation in the work force in their old age.

An ongoing study, ‘Age Structural Transition and Millennium Development Goals in South Asia (No. 62)’, examines the role of AST in achieving the millennium development goals (MDGs) in South Asia. Rapid demographic changes in South Asian countries have created different opportunities and challenges. As these countries have different demographic and socio-economic characteristics, the consequences of AST will vary in each of them. Moreover, progress towards the MDGs in these countries has been rather slow, raising uncertainty over whether they will be achieved before 2015, the date set in the UN Millennium Declaration. The paper aims to undertake a situational analysis of the progress of the MDGs in South Asian countries and to examine the role of demographic factors in achieving them.

School Education with Focus on Kerala

The progress in school enrollment and retention rates in India during the last 50 years was examined, using NFHS-3 data, in ‘On the Progress of School Educational Attainment in India (No. 63)’. Though remarkable progress had been made in primary and upper primary schooling, 10% of children still did not go to school. Urban females had caught up with their male counterparts in school educational attainment, while such a transition was under way in rural areas. However, the paper noted that the rural-urban divide in schooling was highly critical. Progress had been slower at
the high school and higher secondary levels. In the present generation, not even 50% of those enrolled in high schools were expected to successfully complete it and move to the higher secondary level.

Using data gathered on three major inputs in school education—facilities, teachers and students—from Kottayam district in Kerala, a study entitled ‘Policy Interventions and the Impact on School Education in Kerala (No. 64)’ showed that the available school facilities were reasonably good. But the availability of teachers was on the decline, more so among males than females. Enrollment of students was also decreasing with the fall among girls higher than that among boys. Enrollment of children from the Scheduled Tribes (STs) was also on the decline.

At the high school and higher secondary levels, girls developed a definite edge over their male counterparts, according to ‘School Educational Attainment in Kerala: Trends and Correlates (No. 65)’. Using NFHS-3 data, the study constructed schooling year cohorts based on the age of entry to different levels of schooling. The progress noted at lower levels of schooling did not continue to the higher secondary level, with less than half the children enrolling in high school progressing to the next level. Socio-religious differences were sharp at the higher levels, with progress being the least among STs, followed by Muslim girls and Scheduled Castes (SCs). The study noted that the situation of the most vulnerable among the STs was today worse than what the situation of Other Backward Community (OBC), Hindus and forward classes was at the time of the State’s formation in 1956.

A project is under way to analyse schooling continuity in Kerala using survival analysis (No. 66). The focus of “Correlates of Schooling Continuity in Kerala” is on uninterrupted continuity in school, which is a major concern in the state, which has opted for an all-pass policy. This analysis is restricted to children aged seven to 17 years and who have never been to school. Life table techniques are used to arrive at the probability of entering upper primary school (Standard V), high school (Standard VII) and higher secondary school (Standard XI). Cox proportional hazards models are applied to examine the correlates of the “actual age” schooling continuation among the children after controlling for socio-economic factors.

An evaluation of the Sarva Shiksha Abhiyan (SSA) programme in Kerala covered four districts—Thiruvananthapuram, Kollam, Kottayam and Wayanad—during 2008-09 (No. 67). The data was collected through a structured questionnaire in a sample survey of 100 schools in Thiruvananthapuram district, 42 schools in Kollam district, 40 schools in Kottayam district and 14 schools in Wayanad district. Besides, the survey covered two alternative and innovative education centres (AIEs) in each district. During the previous year, the state government had not sanctioned any new school in these districts. The study reported SSA investment on construction of school buildings, additional classrooms, walls to separate classrooms and compound walls. Schools were also equipped with libraries, laboratories and other facilities. As part of inclusive education, children with disabilities were identified and enrolled in regular schools. Their numbers were 9,536 in Thiruvananthapuram district, 7,657 in Kollam district, 8,163 in Kottayam district and 4,955 in Wayanad district. All the 14 districts in Kerala have been declared minority-focused, giving SCs, STs, minority groups and girls equal access to education.

**Higher Education**

The paper ‘Expansion of Higher Education and Concerns of Gender Equity in South India (No. 68)’ showed that higher education had grown rapidly in India in recent years. About a third of the educational institutions imparting higher education were in the four southern states -- Tamil Nadu, Kerala, Andhra Pradesh and Karnataka. About 50% of the professional institutions, particularly engineering and medical colleges, and polytechnics, in the country were in these States. About 30% of higher-education students in India were enrolled in the Southern States. This study was based on national-level data related to enrolment in higher education in 2005. In the tertiary education sector in India, women’s enrollment was just around 38%. Women’s
enrolment (about 41%) was much lower than that of men in the southern States as well, though gender parity was slightly better compared to the whole of India. Only in Kerala was women’s enrolment (54%) proportionally more than that of men (46%).

A study in progress is ‘Institutional Issues and Reform in Undergraduate Higher Education in Kerala (No.69)’, which probes the issues of access, equity and quality in the general arts and science segments of undergraduate education in Kerala. The State has the highest Gross Enrollment Ratio (GER) in higher education in the country. Yet, given its enrolment ratio in primary education and low dropout rates, a 15% enrolment rate in higher education suggests that there are important barriers to making the transition from secondary and/or higher secondary to graduate education. Recent work has noted the lack of research on higher education in the State, which has led to a dearth of information on even basic questions like its reach. For its part, the KHDR 2005 noted that the state had not seen adequate quantitative expansion in the general arts and science segments of higher education and that it trailed five states (Maharashtra, Karnataka, Tamil Nadu, Gujarat and West Bengal) in the growth of graduates as a percentage of the population above the age of seven. However, the KHDR also focused on technical education as a segment that was vital to the development vision of the State, especially its future employment potential. The study will take all this into consideration.

5. STUDIES ON MIGRATION

The research on migration can be grouped under the heads of migration surveys and reports; studies on migration policy; the global financial crisis and migration; studies on migration history; and migration and transnationalism.

Migration Surveys and Reports

The Annual Migration Survey 2008 for Kerala (No. 70) was completed during the reporting year. It provided the latest estimates on emigration from Kerala and those returning to Kerala. The estimates were based on data collected from a sample of 15,000 households selected at random from all the 63 taluks in the State. The number of emigrants from Kerala in 2008 was 21.6 lakh. The figure showed a statistically significant increase of 3.2 lakh from the 18.4 lakh it was in 2003. The number of returnees was 11.0 lakh in 2008. This showed a smaller increase of 2.1 lakh, from 8.9 lakh in 2003.

The Goa Migration Study (GMS) 2008 (No. 71) used four specially designed modules among 6,000 sample households in the State’s two districts. With the aid of a stratified multi-stage random sampling method, it collected qualitative data on emigration to and from the State to analyse its pattern and impact on society and the economy. According to the GMS, 12% of households had an emigrant currently abroad. The emigration rate was estimated at 22.8 persons per 100 households in South Goa and 10.7 persons per 100 households in North Goa. The estimated number of emigrants from Goa was about 56,000, of whom 20% were females. The GMS found Goan diaspora in 43 countries of the world. The Gulf region hosted 56% of Goan emigrants, and 62% of the emigrants left the State in their prime, between the ages of 20 and 39. Among the emigrants, 58% had a minimum of secondary education compared to 28% among the general population, and females were better educated than males. The average cost of migration incurred by a Goan was Rs. 62,000. The total remittances to the state were estimated to be Rs. 800 crore in 2008, equivalent to 6.3% of the state domestic product. Most households, 82%, used the remittances for daily expenses. Nearly a third of them also used it for education while more than a quarter deposited it in banks. One-fifth of the remittances were used for building houses and buying land. The GMS showed that migrant households enjoyed a higher level of consumption than non-migrant ones. Their average level of savings and investment was also higher.

Studies on Migration Policy

The CDS prepared a background document for the Ministry of Overseas Indian Affairs as an input for a national migration
policy. The document (No. 72) discussed the aspects and patterns of labour mobility in a globalising world, and the opportunities and challenges it offered a country like India that has excess human capital and changing notions of migration, from brain drain to brain circulation and exchange. The dynamics and patterns of emigration from India, past and present, were given due consideration, apart from the connection between migration and employment. The legislative and administrative framework of the present system of emigration management, aspects of illegal migration and other issues and concerns were also elaborated in the document in an attempt to visualise a policy for the future. The developmental dimension of migration from India was stressed by pointing to remittances and investment. The document also underscored the necessity of having a national policy on migration that adequately recognised the gender issues involved.

Another study on migration policy was ‘Overseas Recruitment Practices in India: A Critical Assessment (No. 73)’. This investigated overseas recruitment practices in India in an attempt to disentangle the enormous web of corruption and exploitation involved. It delineated the legal and policy frameworks governing overseas recruitment and the formal and informal practices of recruitment agencies, alongside looking into the nature and the levels of corruption and exploitation in the system. The data for the study was collected from eight cities where Protector of Emigrants offices are located, which also serve as major gateways of emigration from India. Supplementary data were gathered by surveying a sub-sample of migrant households covered in the Annual Migration Survey 2007. Information was also collected from emigrants at labour camps, foreign employers, foreign recruitment agents and Indian missions in the United Arab Emirates (UAE), Bahrain and Qatar. The study highlighted inadequacies in the current system of emigration governance, especially recruitment practices, and recommended revamping it.

Revamping the overseas recruitment system also figured in an inquiry conducted (No. 74) to assess its efficiency -- or lack of it. This was largely based on reports in the contemporary media in India and the Middle East and in-depth case studies. It recommended a comprehensive institutional change, including setting up a Migration Management Authority for overseeing all aspects of emigration and expatriate life, with a simultaneous focus on the dynamics at home and in the host countries. It also underscored the need for rewarding legal emigration channels and penalising illegal ones, for which new social protection mechanisms would have to be put in place.

‘Governmentality, Social Stigma and Quasi Citizenship: Gender Negotiations of Indian Housemaids to the Middle East (No. 75)’ was an attempt to unravel the restrictions imposed on unskilled Indian women emigrants (housemaids) to the Middle East and South-east Asia. It explored the subtle manner in which these women negotiate and straddle such limitations in an attempt to find a niche for themselves. Housemaids are outliers within the category of women emigrants in particular and low-skilled emigrants in general. The paper also elaborated on how the women negotiate with the parallel economy of illegal migration to where they are often ‘pushed’ and oscillate between the domains of illegality and legality.
Growth, the Global Financial Crisis and Migration

The global financial crisis has the potential of pushing up the number of emigrants returning to Kerala while pulling down the volume of remittances. The objectives of an ongoing study (No.76) include estimating trends in the return of emigrants to Kerala and the flow of them from the State. This is done by assessing the educational and employment profiles of the returnees and estimating the annual remittances to Kerala by those employed abroad. It also enables an evaluation of the social and economic impact of the recession on Gulf countries.

A study linking migration and the economic growth of Kerala, ‘Migration and Growth: Exploring Kerala’s Performance (No.77)’, used Becker’s theory of allocation of time by households with emigrants to explain the service-led growth that began in the State in the 1970s. Migration had two effects on the allocation of time -- the income effect from remittances and the substitution effect due to the relative indirect cost of production of labour-intensive commodities. The net effect was an increase in the demand for durable goods, which had to be met either by local production or trade. At that time, traders in the region had not become entrepreneurs unlike in other places, probably due to weak incentives and the institutional set up. As a result, the additional demand for consumer durables increased all trade-related activities, including transport, banking and telecommunications. This brought about a service-led growth of the regional economy. A cross-district analysis of the impact of migration supported a backward-bending rural labour supply curve. A vector auto-regression growth analysis of the conventional three sectors (primary, secondary and tertiary) provided empirical support for service-led growth, which was exogenously determined.

Studies on Migration History

‘Land, Labour and Migrations: Understanding Kerala’s Economic Modernity (No. 78)’ sought to explain the historical circumstances that spawned a set of migrations for land reclamation and agriculture in and from the erstwhile princely State of Travancore during 1900-70. On a wide canvas, it was a specific form of economic modernity, where a resolute native agency took the cue from colonialism. Spurred by a modern notion of development, the migrations were instrumental in bringing the newly settled regions under agrarian capitalism. The Syrian Christians, under specific historical circumstances, led the transition resulting in the formation of a new, forward-looking peasant class. The study attempted to disentangle the intertwining history of colonialism, capital and native agency and thereby capture the historical circumstances that unleashed a new discourse of development with land and hard work at its centre. The historical trajectory also demonstrated a weakening of the State’s biopolitics and a turn to community-led biopolitics with its own structures of governance and welfare. A related ongoing study, ‘Narratives of Malabar Migration and the Making of a Productive Citizen (No. 79)’, attempts to read a set of narratives on the peasant, mainly Syrian Christian, migration in Kerala between the 1920s and 1970s, which was a movement of people on a large scale, in successive waves, in search of cultivable land.

Migration and Transnationalism

In a work in progress, ‘Broadening Exchanges and Changing Institutions: Multiple Sites of Economic Transnationalism (No. 80)’, a preliminary attempt is made to provide a theoretical formulation of the experience of economic transnationalism in India in general and in Punjab in particular. It will also attempt to examine the multiple channels, with a special focus on unconventional ones, through which economic transnationalism operates from the perspective of a ‘sending country.’ The paper will locate economic transnationalism at the national, state and local levels in an attempt to explain it as a compelling economic imperative that brings about institutional transformation.

A research project is being conducted on the theme of ‘Transnationalisation, Migration and Transformation: Multi-Level Analysis of Migrant Transnationalism (TRANS-NET) (No. 81)’. Its focus is on multi-layered transnational spaces
operating through political, socio-cultural, economic and educational exchanges. The issue of transnational empowering is of central importance along with an understanding of how migrant activities across national borders emerge, function, and change, and how are they related to the processes of governance in an increasingly complex and interconnected world. The CDS is involved in the research pertaining to transnational relations between India and the UK through the migration of different categories of workers in modern times. The Department of Anthropology, University of Sussex, is involved as a collaborator. The layers of transnationalism are being traced through a cumulative analysis at the macro, meso and micro levels by focusing on multifarious linkages. The Doaba region of Punjab has been chosen as the location of research and a field study is under way.

Another research programme undertaken is ‘Childhood Vacant of Parentage: Labour Migration, Transnational Households and Children (No. 82)’. It seeks to understand the manifold impacts of migration on children from and to Kerala. Migration may improve the economic status of the families concerned by way of remittances. However, the changing nature and experiences of families and the problems of inadequate parental care and guidance for children are seen as serious social costs of international migration. The study will address the question of how children of transnational households (particularly those of low-income families) cope with quasi or full parental absence, or even full or partial surrogate parentage. This is done by acknowledging the agency of children and on the assumption that they have the intellectual and pragmatic tools to understand parental migration, to rationalise separation and even to envision reunification. It will capture the experience of six overlapping categories of children—those of mother-away households, father-away households, and both father- and mother-away households (children living with grandparents or other relatives), in addition to households with one child migrating alone, households of migrants, and children in boarding schools. The experience of ‘loss’ and ‘gain’ of these categories will be juxtaposed, besides including those of children from households of non-migrant and co-residing parents.

6. EMPLOYMENT AND SOCIAL SECURITY

There are four streams of research under this head. They are employment in the rural agrarian sector; labour and employment in the manufacturing sector; labour and employment- -other themes; and social security.

Employment in the Rural Agrarian Sector

‘Rural Employment Growth in India: Distress Driven? (No.83)’, an inquiry conducted using data from the 61st Round of the National Sample Survey (NSS), showed that there had been a turnaround in employment growth in rural India after a phase of jobless growth. Paradoxically, this employment growth occurred during a period of widespread distress in the agricultural sector, which included low productivity, price instability and stagnation, leading to a rise in indebtedness. The analysis revealed that employment growth in rural areas was probably a response to the crisis. In conditions of distress, when income levels had fallen below the sustenance level, the normally non-working population was forced to enter the labour market to supplement household incomes.

Labour and Employment in the Manufacturing Sector

An ongoing study in the organised manufacturing sector seeks to bring out the importance of information technology in explaining the relationship between skill demand and wage inequality (No. 84). It aims to analyse wage differences between skilled and the less-skilled workers. Another project, based on a primary survey of 300 randomly selected wage workers from 125 establishments in the urban segment of Punjab’s unorganised manufacturing sector, examined the effectiveness of skill in shielding wage workers from work-related insecurity. Entitled ‘Relative Advantage of Skill and Wagersworkers Exposure to Insecurity: How Debilitating is
the Impact of Migration Status and Social Class (No. 85), it pointed out that wage workers' acquisition of skill in unorganised establishments was influenced by education level, experience and job stability. It revealed that better-skilled wage workers were relatively less exposed to various work-related insecurities. Nevertheless, it found that wage workers' migration status and social class debilitated their skill advantage—SC/ST and migrant wage workers were relatively more vulnerable across different levels of skill. Similar inferences were derived after controlling for wage workers' gender, age, employment status and labour market experience through an ordered probit regression analysis.

Looking into the quality of jobs generated by Punjab's unorganised manufacturing sector in an era of globalisation, the paper ‘An Inquiry into the Growth Dynamics of Punjab’s Urban Unorganised Establishments: A Labour Perspective’ argued that growth in this segment, under the conditions of exogenous technology, might be due to intensive and extensive use of hired labour. Through secondary and primary data analyses, it concluded that unorganised establishments had generated a large number of jobs, which could be described as being of poor quality because of low earnings, limited upward mobility, unjust wage setting, arbitrary job termination and low job satisfaction.

A paper entitled ‘Contract Work in the Organised Manufacturing Sector: A Disaggregated Analysis of Trends and their Implications’ analysed the employment structure in India’s manufacturing sector in the context of globalisation. Low labour cost and flexibility in labour use had, among other things, become key sources of competitive advantage for firms. Moreover, the decisions of international investors on location were increasingly guided by the availability of cheap labour and the scope for informal employment arrangements. These developments have had varied implications for labour, employment and industrial relations. The nature of employment was changing, with new employment created in the economy being largely contractual, where employment was offered not as an appointment but as an assignment.

**Labour and Employment—Other Themes**

A volume comprising an introduction and eight papers, ‘Labour and Employment in India (No. 88),’ addresses the issues of the changing profile of employment in India and the co-evolution of institutional structures within the labour market. Much of the writing on the labour market in India had been focused on understanding the traditional questions of employment from a neo-classical perspective. The novelty of this book lies in that it tries to project newly emerging patterns and trends in employment across the economy and explore them from an institutional economics framework. The papers were presented in a national seminar at the CDS in April 2008.

In the context of the rising enrollment of women in higher education in Kerala, a study examined its impact on the women’s labour market. Entitled ‘Gender, Education and Employment: An Analysis of Higher Education and Labour Market Outcome in Kerala (No. 89),’ it tried to explain the gender gap in the labour market using NSS data on employment and unemployment. It traced changes in the higher-educated labour market over three time points from 1993-94 to 2004-05. It also examined the role of job preference, gender segregation of occupations and labour force turnover in determining the unemployment level. The study showed that a rise in higher education had led to an increase in unemployment among women, alongside an increase in work participation. Both inter-labour force and intra-labour force mobility accounted for most of the increase in unemployment among higher-educated women. There were distinct job preferences among higher-educated women and men. While women preferred teaching and clerical jobs, men were employed in a wide range of occupations. This skewed job preference among women strengthened gender segregation of the labour market, which adversely affected their employment prospects. The gender segregation of occupations showed an increasing trend over time. This was true of both horizontal and vertical segregation. The highly gender-segregated labour market reduced the scope of increasing female higher education being translated into higher participation in economic activity.
Social Security

A major research project, ‘Social Protection in Rural India,’ which was Part I of a larger study, ‘Challenge of Social Protection in Rural India and China,’ sponsored by the Ford Foundation, was completed during the academic year (No. 90). The main objective of this was developing an intellectual case for basic social security as an entitlement, or a ‘right,’ to the poor, and excluded and vulnerable social groups while pursuing the possibility of universal coverage in India. The first major operational goal was to work out a comprehensive theoretical framework for social security in the human development and rights perspective. Following this, an attempt was made to look at the micro contexts of social security experiences through a field study of a minimum of 500 households in a village Panchayat in Kerala and another in Orissa. Intensive and in-depth case studies on the common coping strategies, both long and short-run, of the households in the face of ‘insecurity,’ were carried out. The analysis was at two levels—the household as well as personal level, and at the institutional level. The different dimensions of security considered at the household and individual level were employment security, food security, housing security, health security, education security, female security, old-age security, and contingent security.

Ongoing work on Part I of the ‘Challenge of Social Protection in Rural India and China (No. 91)’ intends to trace the evolution of existing social security schemes in India and evaluate their social effectiveness. It will explore the possibility of modifying some of them and/or establishing new forms so that the responsibilities and functions of government apparatuses, local communities, civil society organisations and individuals are clearly defined and the specific needs of excluded and vulnerable groups are identified and prioritised. It also aims to prepare a case for the provision of basic social security as a matter of public policy in low-income countries. Besides, the similarities and dissimilarities between China and India in terms of historical, political, economic and socio-cultural factors will be appraised to make the study useful to both countries.

7. GENDER AND WOMEN’S STUDIES

Two major research studies, one on political decentralisation and another on micro finance, contributed to several of the eleven research papers (six completed and five ongoing) and two projects (one completed and one ongoing) reported in this section.

A study (No. 92) on political decentralisation in Kerala discussed the nature of women’s entry to the political domain as elected representatives at the local self-government level and through welfare initiatives, especially Kudumbasree (the State poverty eradication mission). It also explored the tensions engendered by the process and set the analysis in the context of the state’s history of gendered politics. Another paper (No. 93) found that unlike an earlier generation of women who could enter politics only by competing in a field governed by masculine standards, the ability to conform to the norms of elite femininity now appeared to be a valuable resource. But (perhaps consequently) women’s participation in local governance does not mean that they are vested with full powers. While women mobilised by the Kudumbasree programme through neighbourhood groups have some achievements to their credit, an inquiry (No. 94) pointed out that their ability to organise around issues such as work and question dominant gender norms were restricted by the new pulls of consumption and uneven access to mobility. An ongoing paper (No. 95) considers how women on the social margins associate to articulate the claims of citizenship in a welfarist political regime. A completed study (No. 96) examined the different modes of care and nurture that had emerged in the context of Kerala and discussed them in relation to debates around eco-feminism.

A research project on micro finance provided the context for a critical discussion of different policy orientations towards women’s development (No. 97). The paper argued that the most recent alignment of policy to ‘compensatory measures’ was essentially a move in a neoliberal direction. Ongoing work on ‘Women Empowerment through Microcredit: Dissecting the Discourse’ seeks to analyse recent discourses...
on gender in the context of national planning and in relation to micro finance (No. 98). A study on residual farmers on household land (No. 99) critically examined women’s livelihoods in a context where land is no longer the principal means of income for families and where its value as a commodity exceeds that of it as a productive resource. Other concerns raised in research papers related to the transformation of norms of gender and sexuality and their effect on the symbolism and expense of weddings among formerly matrilineal castes (No. 100). In a separate paper, the same scholar argued that the ‘family approach’ of State policy on gender was responsible for the conservative transformation of kinship in post-independent India (No. 101).

An interesting analysis, ‘Gendering Governance or Governing Women? Politics, Patriarchy, and Democratic Decentralisation in Kerala (No. 102)’ focused on women in formal political institutions and local governance, women at the interface of politics and development, and women in oppositional civil social struggles that unfold outside the formal spaces of politics in Kerala. Each aspect was discussed separately and an introduction provided a bird’s-eye view of the history of politics and gender in Kerala in the 20th century. It concluded with a summary of its arguments and a message to the state, political parties, and civil society. In an ongoing project (No.103) on a reader in gender studies, the proposal is to collect data that will be useful as a tool to enter key discussions in the broader field of women’s studies that straddles many subjects–work, sexuality, violence, marriage and family, health, and so on.

8. OTHER STUDIES

Two ongoing research projects and a paper in progress are reported in this section. Both research projects are efforts to take stock, one of knowledge generation and social utility under a multi-annual, multi-disciplinary research programme of the Netherlands government, and the other of microfinance initiatives in Kerala that took shape in the wake of a bank linkage programme initiated by the National Bank for Agriculture and Rural Development (NABARD). The research paper deals critically with dominant notions of community identities in Kerala by examining the recent history of community assertions among Syrian Catholics and argues that efforts to naturalise community identities serve specific ends.

Scholarship on community politics in Kerala, with its endless reiteration of the goals, self-projections, and self-definitions of communities, has been complicit in the reproduction of rancorous community politics. This study (No. 104) hopes to question the homogeneity attributed to ‘community assertion’ through an analysis of different instances of Syrian Christian community assertion in Travancore in the 20th century. The strategies in moments of conflict were not simply and repetitively around religious identity and uniqueness. They were neither homogenous nor fired by the same kinds of strategies or ideologies. There was also no stable opposition to the ‘secular’ as it appeared in the pre-independence Hindu kingdom of Travancore and in post-independent India. The focus of the paper is on the process of primordialising or naturalising the community through avowed performances over time, with different strategies, under different historico-political circumstances, to specific ends. Community, then, appears as an unfixed, non-static constellation, which travels through time with inventions, deletions and renewals.

The project on Multi-annual, Multi-disciplinary Research Programmes (MMRPs) has been in operation in nine countries under support from the Dutch Ministry of Development Co-operation. Appreciating the crucial role of knowledge in development and the appropriateness of each country deciding its own course of development, the Dutch initiative gives autonomy to individual programmes to decide their own agendas of research and development. The main findings of the study (No. 105) show that the progress and impact of the programmes have been very much influenced by changing socio-economic conditions in the different countries. Effectiveness in the management of these programmes also shows wide variation across countries. The development of demand-led research is more widespread and intense in counties and regions with a vibrant democratic and human development base compared to
other societies. The programmes have had a degree of social impact with long-term implications. The study shows that it is possible to promote research in the South without the dominance of Northern researchers by adopting the MMRP mode of financing.

The other ongoing project is ‘Multiple Membership, Sustainability and Quality of Self Help Groups in Kerala (No.106)’. The self-help group (SHG) bank linkage programme was launched by NABARD in 1992 in an effort to extend banking to the poor by recognising thrift and credit groups as its clients. This study, sponsored by NABARD, is in the context of the programme facing several problems in Kerala. The effort is to assess the problems of multiple membership, sustainability and quality of groups. The major micro finance agencies in Kerala not only include the government (state and central), banks of all descriptions and NGOs, but also cultural, religious and political interest groups. The expansion of micro finance in Kerala has no doubt been due to competition among a wide range of agencies promoting and supporting SHGs. More importantly, however, the expression of an interest in micro finance by political, cultural and religious agencies is a reflection of its perceived influence and its contentious character. The social and economic implications of competition for political and cultural loyalties as well as how people choose from among the wide variety of micro finance institutions (MFIs) on offer will also be examined.

**Concluding Observations**

It is evident from this research overview that a diverse set of themes important for the economic and human development of the country and the state of Kerala has been the research focus of the faculty and students of the Centre. There are also issues overlapping different sub-themes listed here. One gets the impression that there could be more collaborative efforts between the faculty to work on such overlapping issues of human, social and economic development tapping in the synergies. The diversity of research themes is also driven by the research projects funded by outside agencies. Though funding for research projects is an unavoidable source of financing for the functioning of research institutes like CDS, a higher share of (untied) core grants may enable faculty members to concentrate on fewer themes and on more fundamental issues of research in social sciences. This may also work as a driving force to publish research articles, rather than concluding their research through the publication of research/project reports.
(a) **DOCTORAL PROGRAMME IN ECONOMICS**

The University of Kerala (KU) had approved CDS in 1975 as a recognized centre for research leading to PhD; and in 1978 the Jawaharlal Nehru University (JNU) amended its Ordinance on CDS to add the PhD Programme to the MPhil at CDS. Of the 129 scholars who were admitted so far, 50 scholars have obtained the PhD Degree: 41 from JNU and 9 from KU.

The Programme has a strong orientation towards development studies with a core economics component. The studies cover areas such as agrarian change and transformation, economic history, health, socio-economic security, industry, labour, gender, population studies, environmental economics, macro-economic issues, technology and trade.

Following the JNU scheme, PhD Programme intake is only from those with MPhil; and hence, does not have any coursework. Selected scholars first rework their study proposals under the guidance of a mentor group of faculty, with research interests in related areas of their study topics. The topics and supervising faculty are finalised by the end of the first
semester. The registration is granted per semester, after review of progress by the Doctoral Committees. In addition, the scholars are to seek confirmation of registration in three semesters after a rigorous process involving both internal and external reviews of their study proposals and an adjunct paper. Scholars can choose to take up employment after two years, if they have obtained confirmation of registration; they can later on seek re-registration to submit the thesis. Registration will cease at the end of six years, beyond which CDS facilities will not be available. Scholars are provided financial assistance for participation in national conferences and seminars. CDS scholars are invited to/selected for major events abroad and thus they get an early exposure to international research initiatives and academia.

Overview of the Year

2008 admission: Twenty four candidates were shortlisted for interview from the 38 applications, based on their score for academic record and the quality of research proposal. The Admission Committee included the Acting Director, ICSSR Western Regional Centre, Mumbai as ICSSR’s nominee. Nine candidates were offered admission: two with UGC’s JRF, one with UGC’s RGNF and six with ICSSR Fellowship. All the nine joined the Programme in August 2008.

The structured periodical reviews and the confirmation process are having positive influence on the studies. We are also expecting a good number from the twenty three, who have de-registered to take up employment, to submit their theses in the coming two years.

V.R. Prabhakaran Nair of the 2001 batch, who submitted his thesis last year, has been awarded degree. His thesis, 'Financial Liberalisation, Capital Structure and Investment: A study of Indian Private Corporate Manufacturing Sector', was supervised by Professors N. Shanta and K. Pushpangadan.

Rudra Narayan Mishra (2003 batch) has submitted his thesis for evaluation. His study on 'Undernutrition in India: Dimensions and Correlates' was carried out under the supervision of Professor D. Narayana and Dr U.S. Mishra.

Rathikanta Kumbhar (2001 batch) and Lekshmi R. Nair (2003 Batch) have re-registered for submitting their theses.

Three scholars of the 2005 batch have de-registered: Nadhanel G.V who joined the RBI, Jayasekhar S, who rejoined Indian Council of Agriculture Research (ICAR) on completion of study leave and Remyaprabha G.

Sartith S and Siddik R. of the 2007 batch had discontinued to join other Universities.
Current Studies

1. **Struggle and Growth of a Traditional Knowledge based Industry: Ayurvedic Manufacturing with a Focus on Kerala**
   Harilal M.S., 2004 – ICSSR Fellowship
   # P. Mohanan Pillai & J. Devika

2. **Competitiveness of Indian Steel Industry**
   Subramanian T.K., 2004 – ICSSR Fellowship
   # Sunil Mani & K. Pushpangadan

3. **Understanding the Nature and Dynamics of Insecurity faced by Workers and their Households in the Urban Segment of Punjab’s Unorganised Manufacturing Sector**
   Varinder Jain, 2004 – ICSSR Fellowship
   #K.P. Kannan & N. Vijayamohan Pillai

4. **Higher Education and Employment of Women**
   Alice Sebastian, 2005 – ICSSR Fellowship
   #K. Navaneetham & Praveena Kodoth

5. **Deprivation and Poverty among Elderly in India**
   Syam Prasad, 2005 – ICSSR Fellowship
   #S. Irudaya Rajan & U.S. Mishra

6. **An Enquiry into the Productive and Environmental Efficiency of Indian Mining Industry**
   Amarendra Das, 2006 – ICSSR Fellowship
   #V. Santhakumar & M. Parameswaran

7. **Cross-border Mergers and Acquisitions in India: An Exploratory Analysis**
   Beena S, 2006 – ICSSR Fellowship
   #P. Mohanan Pillai & P.L. Beena

8. **Schooling Experiences of Dalits and Adivasis in Kerala**
   Binu Roslni, 2006 – GoK Fellowship
   # J. Devika

9. **Contract Farming and its Implication in India: An Economic Analysis**
   Braja Bandhu Swain, 2006 – ICSSR Fellowship
   #K.J. Joseph & V. Santhakumar

10. **Mobility, Migrancy and Globalisation: City–Spaces in Kerala**
    Mythri Prasad, 2006 – ICSSR Fellowship
    #K.N. Harilal & Praveena Kodoth

11. **Care in Later Life and Transnational Mobility: Experiences from Kerala**
    Sreerupa, 2006 – ICSSR Fellowship
    #S. Irudaya Rajan & Praveena Kodoth

12. **Subnational Adjustment Lending: A Study of Recipient States in India**
    Suja Jnanardhan, 2006 – ICSSR Fellowship
    #K. Pushpangadan & Pinaki Chakraborty

13. **Changing Work Pattern of Tribal Women in Attappady**
    Vijaya K.M., 2006 – GoK Fellowship
    # J. Devika

14. **Issues in Health Inequalities: An Application in Indian Context**
    William Joe, 2006 – UGCJRF
    #U.S. Mishra & K. Navaneetham

15. **Macro Economic Impact of Financial Liberalization in India**
    Gargi Sanati, 2007 – ICSSR Fellowship
    #N. Vijayamohan Pillai & Lekha Chakraborty

16. **Globalisation and Organised Informal Labour Markets: A Study of Kerala’s Industrial Workers**
    Neethi P, 2007 – ICSSR Fellowship
    #K. N. Harilal & M. Parameswaran

17. **Crop Diversification, Contractual Arrangements and Globalization: An Empirical Study for Jammu & Kashmir and Himachal Pradesh**
    Rajeev Sharma, 2007 – ICSSR Fellowship
    #K. Narayanan Nair & Chandan Mukherjee

    Vijay Korra, 2007 – UGC/RGNF
    #S. Irudaya Rajan & U.S. Mishra
19. **Viewing Competition Economics Through the Lens of Institutional Framework: A Study in the context of Indian Manufacturing Sector.**
   Anoopa S. Nair, 2008 - UGCJRF
   #K. Pushpangadan & M. Parameswaran

20. **Macroeconomic Instability and Industrial Fluctuations: Macro and Micro Evidence from India**
    Atish Kumar Dash, 2008 - ICSSR Fellowship

21. **Harnessing ICT for Addressing Poverty; A Study of Indian Experience**
    Bibhunandini Das, 2008 - ICSSR Fellowship

22. **Law, Social Norms and Contracts: A Few Essays.**
    Indervir singh, 2008 - UGCJRF

23. **Integration of International Stock Markets: Empirical Analysis: with special reference to India**
    Krishnareddy Chittedi, 2008 - ICSSR Fellowship

24. **Deteriorating Fiscal federalism, Reform and Globalisation: Empirical Evidence From India.**
    Midhun V.P., 2008-, ICSSR Fellowship

25. **Migration, Conflict and Economic Development in the North-Eastern Region: The Cases of Assam and Meghalaya**
    Rikil Chyrmang, 2008 - UGC/RGNF

26. **Technological Innovation Process in India under Globalisation: Towards a Sectoral Perspective**
    Sravanthi Choragudi, 2008 - ICSSR Fellowship

27. **Measurement of Services in National Income with special reference to Health Care Services.**
    Suparna Pal, 2008 - ICSSR Fellowship

---

**(b) M Phil PROGRAMME IN ECONOMICS**

The 34th batch of the Programme (2008–10) commenced on August 06, 2008. The class has 16 students; 5 from Kerala, 3 from West Bengal, 2 from Orissa and 1 each from Andhra Pradesh, Assam, Punjab, Tamil Nadu and Uttar Pradesh as well as a UK national.

As part of the *Research Methodology* course, the students undertook field surveys on *Time-use patterns of the Elderly*
in Prasanth Nagar Housing Colony and The Saving and Consumption pattern of In-migrant Workers in Thiruvanathapuram. The Coursework is scheduled to be completed by May 09, to allow two months preparatory time to finalise their dissertation study proposals. Submission of dissertation by the first quarter of 2010 would give them an early start on their PhD studies or other career prospects.

All the 10 students of the 2007–09 batch, are progressing well with their dissertation studies and are expected to complete them well before June 2009.

MPhil Awards of 2008–09

The year 2008-09 had ten M.Phil dissertations covering a number of issues like competition in the manufacturing industry, relationship between agricultural prices and macro economic fluctuations, social norms and individual decision making, and diffusion of hybrid silkworm. ‘Competition in Indian Manufacturing Industries: Identification, Analysis and Impact’ by Anoopa S Nair examines the extent of competition in the Indian manufacturing industry focusing on dominant firm behaviour. In ‘Impact of Financial Liberalisation on Efficiency in Capital Allocation: Evidence from Indian Manufacturing Sector’ Atish Kumar Dash analyses the efficiency of investment allocation in Indian manufacturing industry against the background of financial sector liberalisation, which is expected to improve allocative efficiency. The relationship between macro economic fluctuations and agricultural prices is examined by M Bharath Raj Urs in his study on ‘Macro Economic Analysis of The Agricultural Prices in India.’ The dissertation ‘Social Norms and Individual Decision Making: An Empirical Investigation of Occupations in Punjab’ by Indervir Singh seeks to explore the impact of social norms, informal laws of the society sustained by social sanctions, on economic activities, more precisely choice of occupation. Mantu Kumar Mahalik studied the key macro economic factors determining the housing prices in India using both macro and micro level information in his dissertation, ‘Housing Price behaviour in Urban India: A Case study of Bhubaneswar’. The study, ‘Service Sector Growth and Employment: The Indian Experience’ by Minu Rose Joy examines the service sector growth and service sector employment in India focusing on employment quality. The dissertation by G.K Rajesh titled ‘Diffusion of Bivoltine Hybrid Silkworm in India’ examines the socio-economic determinants of bivoltine hybrid silkworm adoption among sericulture farmers in India by taking a case study of farmers in Sreerangapattnam Taluk of Mandya district in Karnataka. Rajesh M., makes an attempt to situate the role of Information and Communication Technology in the development discourse on Kerala against the background of globalisation and knowledge based growth of Kerala’s economy in his dissertation titled ‘ICT and Kerala’s Development: An Analysis of Akashya Experiment’. Rikil Chyrmang’s study on ‘Education and Migration from the Northeastern Region in India’ examines the interrelationship between education and migration from Northeastern region of India. In her dissertation titled ‘Technology Strategies under Globalisation: A Study of India’s Manufacturing Sector’ Sravanthi Choragudi examines, against the background of dramatic changes in the industrial policy regime, the determinants of choice of technology strategies of firms in Indian manufacturing industry.

DISSERTATIONS OF MPHIL PROGRAMME 2006–08

I MACRO ECONOMIC ISSUES

1. A Macroeconomic Analysis of The Agricultural Price In India. Bharath Raj Urs M Supervisors: K. Pushpangadan & Lekha Chakraborty

2. Housing Price Behaviour In The Urban India: A Case Study of Bhubaneswar. Mantu Kumar Mahalik Supervisors: N. Vijayamohanan Pillai & Hrushikesha Mallik
   Midhun V. P
   Supervisors: Pinaki Chakraborty & Lekha Chakraborty

4. Service Sector Growth and Employment: The Indian Experience
   Minnu Rose Joy
   Supervisors: K. J. Joseph & Vinoj Abraham

II INDUSTRY

1. Competition In India n Manufacturing Industries: Identification, Analysis and Impact
   Anoopa S. Nair
   Supervisors: K. Pushpangadan & M. Parameswaran

2. Impact of Financial Liberalization on Efficiency In Capital Allocation: Evidence From Indian Manufacturing Sector
   Atish Kumar Dash
   Supervisors: N. Shanta & N. Vijayamohan Pillai

3. Technology Strategies Under Globalisation: A Study of India’s Manufacturing Sector
   Sravanthi Choragudi
   Supervisors: K. J. Joseph & M. Parameswaran

III POPULATION & LABOUR

   Indervir Singh
   Supervisors: V. Santhakumar & Vijayamohan Pillai

2. Education and Migration from the North Eastern Region in India,
   Rikil Chyrmang
   Supervisors: S. Irudaya Rajan & Chinnappan Gasper

IV TECHNOLOGY DIFFUSION

1. Diffusion of Bivoltine Hybrid Silkworm in India
   Rajesh G. K
   Supervisors: P Mohanan Pillai & M. Parameswaran

2. ICT and Kerala’s Development: An Analysis of Akshaya Experiment.
   Rajesh M
   Supervisors: K. J. Joseph & Vinoj Abraham

(c) SHORT TERM TRAINING PROGRAMMES

Teaching Innovations Programme in Economics (TIPE) for College Teachers in Kerala (June 23 - July 18.)

The third version of the Teaching Innovations Programme for College Teachers in Economics was offered between June 23 and July 18. The programme, for the first time, was thrown open to lecturers from Colleges and Universities throughout the country, and it attracted thirteen lecturers from Colleges in Kerala, Tamil Nadu, Puducherry and West Bengal. The structure of the programme was similar to the first two versions; with four one-week modules covering Macroeconomics, Microeconomics, Econometrics, and selected topics in Indian economy. The major difference of the present version when compared with the previous two was that for each of the modules, the number of lectures was standardised at 10 lectures of 1 hour 30 minutes each. Although the programme sought to give equal importance to all the four modules, the emphasis this year was on the teaching of Macroeconomics, a subject that has assumed much importance given the ongoing process of globalisation of the Indian economy. Both theoretical and empirical aspects were well-covered in this module.

The highlight here was the introduction of a new textbook, *Macroeconomics* (Delhi: Pearson Education, 2008) by Professor Errol D’Souza of Indian Institute of Management. Professor D’Souza took the participants through the various chapters of this book. Workshops in which a number of exercises were worked out, so that the concepts learnt in...
the theory sessions were applied to actual macroeconomic issues confronting India’s economy, such as national income accounting, inflation, and balance of payments, was another highlight.

In addition, classes were handled by a number of well known external resource persons such as Professor Soumyen Sikdar (University of Calcutta), Professor Joga Singh Khokhar (Sri Ram College of Commerce, University of Delhi), Professor M. H. Suryanarayana and Professor R. Nagaraj- both from the Indira Gandhi Institute of Development Research, Mumbai. The course thus introduced the participants to: new ways of handling topics in economic theory; mathematical modes of expression while analyzing relationships between economic variables and; a deeper understanding of the database of the economy for appreciating current debates in India’s economy. One of the participants, Dr Himanshu Sekhar Rout, has taken over the running of the course blog and it has become a lively forum for exchange of information about new teaching resources.

A completely revised fourth version of the programme seeking funding from ICSSR has been finalised.

CDS-UNCTAD Training Programme on Contemporary Issues in International Trade (10-30 October, 2008)

The training programme was organised as a part of the UNCTAD-DFID-GOI Initiative at CDS on Strategies and Preparedness for Trade and Globalisation in India. From a large number of applicants, 29 scholars, including six from CDS, were selected. The course was designed and offered with the aim of familiarising participants with recent theoretical and empirical developments in the research on international trade.

Resource persons included eminent scholars, policy-makers, and practitioners from across the country, apart from CDS faculty. The inaugural lecture on ‘India’s Negotiations at the WTO – Post Doha and its Bilateral and Regional Engagements’ was delivered by Shri. S. N. Menon, former Secretary, Department of Commerce, Government of India. The course provided wholesome coverage of key debates and discussions in the current research on international trade, such as the trade policy reforms in developing countries, issues relating to India’s international competitiveness, new trade theories, application of CGE Modelling, issues relating to foreign - and regional - trade agreements, various agreements under WTO, and their implications.

The participants also gained considerable exposure to different databases and econometric tools relevant to the exploration of trade- and globalisation-related issues. The feedback from the participants has been quite encouraging. Our confidence and enthusiasm to conduct more of such training programmes has been enhanced.

Methods and Approaches in Research on Migration Issues (1-5 December, 2008)

The Research Unit on International Migration conducted a short-term training programme on ‘Methods and Approaches in Research on Migration Issues’ at CDS. This is the third of its kind being organised by the RUIM, and aims at capacity-building in migration research. It was supported by the Ministry of Overseas Indian Affairs (MOIA), Government of India, New Delhi.

The programme was attended by 18 young scholars from various disciplinary backgrounds from across the country, who were selected from a large number of applications.
The programme exposed the participants to diverse issues in migration research such as global trends in international migration, historical dimensions of migration from India, emigration and India’s foreign policy, India’s new migration policy, economic implications of high-skilled migration, migration and health, measuring migration with census and NSSO data, remittances and its developmental implications, mental health and migration, gender dimensions of migration, Kerala migration surveys, migration and development, migration in a trade theoretic perspective, migration and employment and issues of emigration to the Gulf.

Design and Evaluation of Innovation Policy (DEIP) at NISTADS, New Delhi
(2-7 February, 2009)

This training programme was jointly organised by the National Institute of Science, Technology and Development Studies (NISTADS), Council of Scientific and Industrial Research (CSIR), New Delhi, Centre for Development Studies, and the United Nations University-MERIT, Maastricht, The Netherlands at New Delhi. It targeted at senior and middle level officials of institutions involved in the formulation and implementation of science, technology and innovation policies in India. Personnel from private sector and non-profit organisations involved in innovation strategy-formulation and implementation were also eligible for participation. The programme took the participants through the nuances of designing innovation policies and evaluating their actual effectiveness, using conventional and non-conventional science, technology and innovation indicators. There were 22 lectures spread over a period of five and half working days; 48 candidates from all the major scientific agencies in the country and 6 doctoral students from leading research institutions and universities participated.

Universalizing Socio-economic Security for the Poor: ISS-SEWA-CDS Post-Graduate Diploma Training Programme
(9-26 March, 2009)

CDS has been teaming up with the Institute of Social Studies (ISS), The Hague, The Netherlands and Self-Employed Women’s Association, Ahmedabad, India, every year for a Post-Graduate Diploma programme on ‘Universalizing Socio-economic Security for the Poor (USS)’. The programme imparts empirical information and guidance towards understanding issues related to the universalisation of socioeconomic security for the poor and socially excluded. This is an eleven-week diploma course, which includes a five-week study visit to India to gain field exposure to two different approaches to the universalisation of socioeconomic security: the movement-led approach of the Self Employed Women’s Association and the state-led approach pursued in Kerala. The syllabus provided a conceptual framework for policy analysis to address the challenges faced in universalising socio-economic security. Students acquired skills in problem identification, policy analysis and programme design. At CDS, students attended lectures and interactive sessions with academics, activists, elected representatives, bureaucrats and others, and conducted field visits. This year the programme was attended by participants from Switzerland, Nepal, Thailand, The Philippines and India.

(d) RESEARCH AFFILIATIONS

Ms. Anette Ekelund, Master Student (Development Studies), Department of International Environment and Development Studies, Norwegian University of Life Science (UMB) for her research work on The Impact of Labour Migration on
Children’s Development in Kerala, India for a period of 4 months from September 03 to December 31, 2008.

Ms. Ingvild Jacobsen, Master Student (Development Studies), Department of International Environment and Development Studies, Norwegian University of Life Science (UMB) for her research work on Responses to Violence Against Women: Challenges and obstacles in promoting women’s empowerment and rights in Kerala for a period of 4 months from September 03 to December 31, 2008.

Dr. Margaret Winifred Walton-Roberts, Associate Professor, Department of Geography and Environmental Studies, Wilfrid Laurier University, Canada for her research work on Female Temporary Migration from Kerala to Bahrain and UAE: Socio-cultural Impacts in the Sending and Receiving Religion for a period of 10 months from September 17, 2008 to July 17, 2009.

Dr. Terry Macedo Ivanauskas, Rua Heitor Bariani 511, Tatuape, CEP 03080-020 Sao Paulo, SP, Brasil for his research work on The History, the Achievements and the Process of Decentralization of Kerala’s Health Care System for a period of one year from December 17, 2008 to December 16, 2009.

Ms. Yoko Kon, Ph.D Student, University of Tokyo, Japan for her research work on A Society of Plural Modernities: The Privatization and Pluralization of Educational Sphere in Kerala for a period of one year from March 26, 2009 to March 25, 2010.
The Centre’s publication programme publishes books, monographs, research reports and selected M Phil and PhD theses. The findings of research at the CDS are initially brought out as working papers which are later published as articles in professional journals. At present there are a total of 410 working papers and 45 books brought out under the CDS programme. This year 12 working papers were published, covering areas like agriculture, health, industry, innovation, finance, trade and employment etc. A total of 11 books have been published by the faculty, 23 articles in national and 10 articles in professional journals, 29 chapters in edited volumes and 14 publications in other papers, volumes etc have also been brought out. The faculty researches are also published by well reputed publishers like, Oxford University Press, Prentice-Hall, Anthem Press, Bookwell Publishers, Sage Publishers, Manohar Publishers, Rawat Publications Daanish Books and Orient Longmans.

The CDS also brings out a quarterly newsletter, 'CDS Chronicle' which is an important medium for communicating with the public the activities of CDS and its accountability.

Dr. Vinoj Abraham, Wage Inequality in the Indian Organised Manufacturing Sector: The Role of Information Technology (March 20, 2009)
Prof. K. J. Joseph & Dr. Vinoj Abraham, *Information Technology Agreement of WTO and India’s IT Sector* (March 26, 2009)

(c) SPECIAL LECTURES

World Population Day Celebrations
Dr. C. R. Soman, Chairman, Health Action by People, *Demographic Transition and Emerging Public Health Issues* (July 11, 2008)
Prof. Amit Bhaduri, *Lectures on Macroeconomic Analysis for Policy Formulation in India* (December 2-3, 2008)

Women’s Day Celebration
Dr. Seema Bhaskar, Director, Mahila Samakhya Society, *Beyond the Agent of Social Development: Contemporary Issues and Challenges before Malayali Women.* (March 11, 2009)

(d) PUBLIC LECTURES

Shri S.N. Menon, Formerly India’s Ambassador to WTO and Secretary, Department of Commerce, Government of India, *India’s Negotiations at the WTO (Post Doha) and its Bilateral and Regional Engagements* (October 10, 2008)

The Second B.G. Kumar Endowment Lecture on ‘Intersecting Inequalities’ by Prof. Gita Sen, Centre for Public Policy, Indian Institute of Management, Bangalore. (January 24, 2009)

(e) INTERNATIONAL / NATIONAL CONFERENCES

International Conference on Employment Opportunities and Public Employment Policy in Globalising India, at Centre for Development Studies (CDS) during April 3-5, 2008, co-ordinated by Dr Pinaki Chakraborty

CDS-UNCTAD Seminar on International Competitiveness and Inclusive Development held at CDS during October 20 – 21, 2008, co-ordinated by Prof. K.J.Joseph and Dr. Hrushikesh Mallick.

National Conference on Challenges in Human Development held at CDS, during January 23-25, 2009, co-ordinated by Prof. Navaneetham and Dr. Vijayamohan Pillai.

International Conference on Role of New Technologies in Sustainable Development: The Case of Kerala held at (CDS), Trivandrum, January 27-28, 2009, co-ordinated by Prof. Sunil Mani.

International Conference on ‘India’s two Faces: the Haves and Have-Nots’ (CDS- BNUIF Annual Conference) at CDS during March 23-25, 2009, co-ordinated by Prof. Pushpangadan.

(f) WORKSHOPS

Two-day Regional Workshop on Local Governments and Decentralized Governance Organised by the Commission on Centre-State Relations, New Delhi at the Centre for Development Studies, Thiruvananthapuram during March 10-11, 2008.

A half-day Workshop under the project in collaboration with the University of Sheffield on *Embedding Poor People’s Voices in Local Governance* was held at Centre for Development Studies on April 11, 2008.

One-day Consultation Workshop on Kottathara Panchayat Human Development Report, sponsored by the Kerala State Planning Board, Trivandrum on June 16, 2008.
One-day Workshop on Insights from NFHS-3 data – July 26, 2008 – co-ordinated by Prof. S.Irudaya Rajan and Dr.K.S.James

Talk on “India and Sri Lanka: Ancient Civilization in 21st Century delivered during the Visit of Scholars from the ‘Fulbright-Hays Seminars Abroad Programme 2008’

Speakers were Dr.J.Devika, CDS; Dr.V.J.Varghese, CDS and Dr.P.J.Cherian, Director, Kerala Council of Historical Research, Trivandrum, on Monday, July 28, 2008.

Annual Faculty Review Workshop, held at Vizhijam, Trivandrum during 4-5 August 2008, coordinated by Prof. K.J. Joseph,

Round Table Discussion on Global Financial Crisis And Its Impact And Implications For Workers in The Gulf Countries held at CDS on February 3, 2009. Co-ordinated by Prof. S. Irudaya Rajan

National Research Programme on Plantation Development held at Hotel Mascot & CDS, during March 6-7, 2009, co-ordinated by Prof. K J Joseph

Workshop on Gender History Reader, at CDS on April 03, 2009, co-ordinated by Dr. Devika. J
Both the faculty and the students are involved in participating and presenting papers at seminars, conferences and workshops outside the CDS. Out of a total of 51 international seminars, 15 faculty and 7 students attended or presented papers at the seminars. In the case of national seminars too out of a total of 87, 19 faculty and 4 students presented papers. It is noteworthy that this year has recorded an increase in the involvement of the students as against the previous years.

INTERNATIONAL SEMINARS

J. Devika

● Presented a paper ‘Women, Community, and Marxism: Kerala in Arundhati Roy’s The God of Small Things’ at the Invited Guest Seminar, University of Colombo, organised by the Department of English, University of Colombo on February 12, 2009.

● Presented a paper ‘Really Beyond ‘Constituencies Suitable for Ladies’? Reflections on quotas for women in local governance in India’ at the International Conference: Decentralization, Local Power and Women’s Rights: Global Trends in Participation, Representation and Access to Public Services, organised by International Development Research Centre, the Government of Mexico, and the UNDP at Mexico City, during November 18-21, 2008.
● Presented a paper ‘Political Society and the Consumer-Citizen: Reflections on politics and women’s self-help groups in Kerala State, India’ at the Invited Guest Seminar, jointly organised by Gallatin School NYU and CUNY, New York at New York University on November 25, 2008.

● A paper ‘Politics, Patriarchy, and Democratic Decentralisation in Kerala’ was presented at the Annual Summer Conference of the International Association for Feminist Economics, organised by University of Turin, Italy during June 19-21, 2008.

M. Parameswaran
● Participated in the 3rd Meeting of Winners of the Bank of Sweden Prize in Economics Science in Memory of Alfred Nobel at Lake Constance, Germany, during August 20-23, 2008.

Hrushikesh Mallick
● Participated in 3rd Lindau Nobel Laureate Meetings in Economic Science in Memory of Alfred Nobel, held in Germany and Switzerland from August 20-23, 2008.

N. Shanta
● Presented a paper along with P. Mohanan Pillai titled ‘A Tale of two Inflationary Phases: What do the Data speak about Regional Inequality’ at the International Conference on ‘India’s Two Faces: the Haves and The Have-Nots’ (CDS-BNUIF Annual Conference 2009), organised by British Northern Universities of India Forum (BNUIF), and CDS at Trivandrum during March 23-24, 2009.

● A paper titled ‘Gender and Technology’ was presented at the International Conference on, Role of New Technologies in Sustainable Development: The Case of Kerala, organised by the CDS and Department of Political Science, McGill University, Montreal, Canada, and McGill Centre for Developing Area Studies at CDS during January 27-28, 2009.

Sunil Mani
● Presented a paper titled, ‘Financing of Industrial Innovations in India, How Effective are Tax incentives for R&D?’ at the Second Conference on Micro Evidence on Innovation in Developing Economies, Center for Applied Statistics, Renmin University, Beijing, and UNU-MERIT, United Nations University and University of Maastricht at Renmin University of China, Beijing, April 21-23, 2008.

● Was a discussant to the paper on ‘Economic Globalisation and Weak States of South Asia’ at the conference on Weak States and South Asia Insecurity Predicament, at McGill University, Montreal, Canada, October 4, 2008.

● Participated as a panelist in the round table on ‘Transforming South Asia,’ organised by the McGill Centre for Developing Area Studies and Canadian International Council at McGill University, Montreal, Canada on October 4, 2008.

Organised and co-ordinated an International Conference on ‘Role of New Technologies in Sustainable Development: Case of Kerala’ during January 27-28, 2009, in collaboration with the Department of Political Science, McGill University, Montreal, Canada, and McGill Centre for Developing Area Studies. The conference was sponsored by the IDRC and the Foreign Affairs and International Trade Canada (DFAIT).

P. Mohanan Pillai

Presented a paper titled ‘Inflation in India- what do the Data say about Regional Dimensions’ at the International Seminar On India’s Two Faces: The Haves and Have Nots, organised by British Northern Universities India Forum at, Thiruvananthapuram on March 23-25, 2009.

Praveena Kodoth

Attended as Civil Society representative from India and presented a paper on the ‘Role of Civil Society in Implementing International Instruments in India,’ at the Regional Dialogue on Implementation of International Instruments on Protecting Rights of Migrants, organised by the International Organisation for Migration and UNIFEM in Dhaka between August 18-20, 2008.

Vinoj Abraham

Participated in the project ‘Impact of Networks, Globalization, and their Interaction with EU Strategies’ conducted by FEEM, at the Bologna University, Italy.

Participated in the Methodology workshop of the project ‘Impact of Networks, Globalization, and their Interaction with EU Strategies’ organised by Gordon Institute of Business Studies, Johannesburg, South Africa at the Zebula Lodge, Bela Bela, South Africa during March 1-5, 2009.

Presented a paper ‘Women in Work-Long term Macro Trends’ at the SEWA Round Table on Women Workers, organised by SEWA, Kerala at the CDS during March 7-8, 2009.

Participated at the Methodology Workshop of the project ‘Impact of Networks, Globalization, and their Interaction with EU Strategies’ organised by Gordon Institute of Business Studies, Johannesburg, South Africa at Zebula Lodge, Bela Bela, South Africa during March 1-5, 2009.

Presented a paper ‘Leader in Production, Laggard in Consumption: the Case of Information Technology Diffusion in India,’ Sixth GLOBELICS Conference, organised by UNAM and UAM, Mexico at the Fiesta Americana Hotel, Mexico City, Mexico, during September, 22-24, 2008.

Submitted a paper ‘Rural Non-Farm Sector Employment in India: Distress Driven or Growth Driven?’ at the International Conference on Employment Opportunities and Public Employment
Policy in Globalising India, organised by the ICSSR at the CDS during April 3-5, 2008.

K. Navaneetham

- Presented a paper ‘Age Structural Transitions, Human Capital and Economic Growth in India: Opportunities and Challenges,’ at the UNFPA Expert Group Meeting on Mainstreaming Age Structural Transitions into Economic Development Policy and Planning, organised by UNFPA in collaboration with Institute of Future Studies of Stockholm University at Vienna, Austria, during October 7-9, 2008.

K. Pushpangadan

- Presented the following papers – ‘Product Market Competition and Employment in the Organised Manufacturing Sector in India’ (jointly with N. Shanta); ‘Migration and Growth: Exploring Kerala’s Performance’; ‘A Tale of two Inflationary Phases: What do the Data Speak about Regional Inequality (Jointly with N. Shanta and P. Mohanan Pillai) and ‘Does Water and Sanitation Influence Poverty in Rural India? (Jointly with G. Murugan) at the First Annual Conference of British – Northern Universities Indian Forum, organised by CDS and held at Kovalam during March 23-25, 2009.

- Was Chairperson for the ‘Capacity Building Programme’ at the First Annual Conference of British – Northern Universities Indian Forum, organised by CDS, and held at CDS on March 25, 2009.

- Presented a paper (Jointly with G. Murugan) titled ‘Sustainable Development: Technology and Water Resources’ at the International Conference on the Role of New Technologies in Sustainable Development: The Case of Kerala,’ organised by IDRC and McGill University, held at CDS on January 27-28, 2009.

D. Narayana

- Spoke on ‘Ten Years of Partnership between the Centre for Development Studies and Université de Montréal’, at the celebration of the 40th anniversary of Shastri Indo-Canadian Institute, Université de Montréal, Montréal, on October 31, 2008.

- Participated in a panel discussion on ‘Revisiting Good Health at Low Cost’ at the Canadian Conference for International Health, October 27, 2008, Ottawa.

- Presented a paper on ‘Kerala: Good Health at Low Cost?’ at the Intersectoral Action to Improve Health, Workshop, November 3-5, 2008, University of British Columbia, Vancouver.

K.J. Joseph

- Presented a paper on ‘Industry University Interaction in India’ (co-authored with Vinoj Abraham in the Seminar on Industry-University Linkages and Economic Performance, held in Seoul National University on February 27, 2009 in Seoul, Korea.

- Participated in the project-launching workshop of the EU-sponsored project on ‘From Global Production Network to Global Innovation Networks’ at Bologna, Italy.

- Discussant of the session on ‘Globalization, MNC and innovation: Issues related to MNC in developing countries,’ at the Sixth GLOBELICS International Conference, September 22-24, 2008, Mexico City, Mexico.

- Participated the preparatory meeting of the Research Project on Innovation Systems for Inclusive Development: Lessons from Rural China and India organised by National Science Foundation, China and IDRC, Canada, March 24-26, 2008, Beijing.

- Initiated the Panel discussion on ‘Is There a Need to Develop New Rules of the Game at the Global Level to Compensate the Developing Countries for Brain Drain,’ at the Sixth GLOBELICS International Conference.
Conference, September 22-24, 2008, Mexico City, Mexico.

- Presented a paper on, and discussant of the session on ‘Globalization, MNC and Innovation: Issues related to MNC in Developing Countries,’ at the Sixth GLOBELICS International Conference, September 22-24, 2008, Mexico City, Mexico.

- Presented a paper on ‘India’s Innovation System,’ in the 3rd BRICS seminar held at Sustainability Institute, Cape Town, South Africa, August 28-30, 2008.

V.J. Varghese

- Presented a paper entitled ‘Towards a New Migration Policy: India’s New Regime of Transnationalism’ in the international conference on Managing Transnational Migration: Comparing Transnational Migration Policies and Patterns in the World, organised by the Institute of Political Science and Governance, Tallinn University, Tallinn, Estonia on November 6, 2008.

D. Narayana

- Associated with for the Finance Department, Government of Kerala in preparing the Memorandum for the 13th Finance Commission.
(a) Planning Commission Endowment in Development Economics

The Planning Commission, Government of India had Instituted the Endowment in 1998 with a contribution of Rs.40.00 lakh to promote research studies on various issues relating to Indian economy. Dr Sunil Mani, Professor, CDS has been the Chair Professor since September, 2005. The Unit focused on carrying out research projects, teaching and training programmes under the themes, namely (a) measurement innovation using new indicators; and policy instruments for promoting innovation at the firm level; and (c) Telecommunication industry. The Unit also launched collaborative training programmes to bring the research results to the innovation policy practitioners and forge a number of collaborative research and training links with prominent institutions specializing in economics and policy studies of technological change in India and abroad. The report on the research carried out under the Unit are reported elsewhere in the Annual Report.

(b) Reserve Bank of India Endowment Unit on Economic Development

The Reserve Bank of India provided a one time corpus of Rs.150 lakh and instituted the Reserve Bank of India endowment in April 2002 at the Centre. Dr D Narayana, Professor, CDS is the Chair Professor of the Unit. The Unit focused on consolidating the work on access to health care and inequalities in health, implementation of a community based health insurance scheme in Wayanad, Kerala and possible scaling of the scheme, facilitating local planning and monitoring by building awareness and continuing sensitisation of citizens, elected officials and civil servants and to build evidence on health, vulnerability and impacts of public interventions. The Unit has provisions for post-doctoral fellows and to grant fellowships to doctoral scholars selected for doctoral studies at the Centre.

(c) Research Unit on Local Self Governments

The Research Unit on Local Self Governments was set up by the Government of Kerala. The objective of the Unit is to generate knowledge on the functioning of local self governments to help
them in efficient planning and implementation of projects for local level development. The Unit conducts research concurrently on the problems faced by the Local Self Governments in carrying out the functions expected from them. The action research initiated by the Unit are good governance initiative, particularly e-governance in two grama panchayats and in the district panchayat of Kasargode; pilot study on participation between cultivators and scientists; implementation of ‘ksheeramrutham’ project on Chemnad grama panchayat, implementation of watershed development programme in Cherpady; pilot studies on urban governments; and pilot studies on NREGP in Kasargode district.

(d) Research Unit on International Migration

The Ministry of Indian Overseas Affairs, Government of India, set up a Research Unit on International Migration at the Centre to advance its studies on international migration from Kerala. During the reporting period, the Unit completed a series of studies and notable among them are a draft migration policy document, studies on recruitment agencies; Goa migration study and Kerala Migration Studies 2008 and 2009. Dr S Irudaya Rajan, Professor is the Chair Professor of the Unit.

(e) Research Unit on Plantation Development

The Ministry of Commerce, Government of India approved the proposal to set up a Research Programme on Plantation Development at the Centre with an endowment of Rs.500.00 lakh. The objectives of the Research Programmes are to undertake policy oriented research and to build up a data base on all aspects of the plantation sector at the regional, national and international level; generate interest on issues relating to plantation sector among researchers and help capacity building to enhance research in future; and act as a depository of knowledge and help its dissemination among different stakeholders to facilitate informed decision making. The Research Programme is being organized at the initiative of Dr KJ Joseph, Professor.

(f) P.K. Gopalakrishnan Endowment Fund

The late Dr PK Gopalakrishnan was one of the founder members of the Centre. He was a scholar, policy advisor and an institution builder par excellence. He was one of the few outstanding personalities who played an important role in the establishment of many advanced institutions of research and learning in Kerala during 1970-80. As a Policy Advisor and Secretary to the Government during the Chief Ministership of the late Shri C Achutha Menon, Dr Gopalakrishnan is credited with the formulation of a science and technology policy for the State. To perpetuate the memory of Dr Gopalakrishnan, his family instituted the endowment at the Centre.

(g) B.G. Kumar Endowment Fund

The Endowment was set up by the family of Dr B.G. Kumar, an young economist who worked with the Centre as Associate
Fellow during 1990-93 passed away in early 1993 after a prolonged illness. The endowment was set up by the family to perpetuate his memory. The objective of the endowment is to organise special lectures and provide grant to faculty for seed research. The Centre could not organise any activity under the endowment during the reporting period.

(h) A.D. Neelakantan Endowment Fund

AD Neelakantan was a student of the first batch of the M.Phil Programme during 1975-76. He died in an accident in 1977 and in his memory, an endowment fund was instituted with a modest contribution from his family, students and staff of the Centre. The purpose of the Endowment is to provide token financial support to deserving scholars to undertake research on socio-economic problems. During the reporting period, the Centre could not organise any activity under the endowment.

(i) Joan Robinson Endowment Fund

Prof Joan Robinson spent a few months as Visiting Fellow at the Centre in the mid-seventies. Out of the royalty that she earned from one of her books, she instituted an endowment to support public lectures at the Centre. Prof Robinson passed away and in her memory, the Centre had organised seven public lectures. The last public lecture was delivered by Professor Maria Cristina Marcuzzo of University of Rome, Italy.
(a) LIBRARY

The year 2008-2009 was a year of consolidation. Dr. T K Subramoni took over as Chief Librarian in June 2008. To ensure proper services, a shift system for staff was introduced along with continuous working hours. A senior professional is also assigned including on Saturdays to oversee the functions of the Library. An auditing of all issue records was carried out and in the process borrowers were reminded to return or renew the overdue books.

As part of the scheme upgrade the skills of Library professionals Library professionals were encouraged to attend professional training programmes, seminars and workshops. VK Anil Kumar participated in a five-day workshop on ‘Dspace for building Institutional Digital Libraries’ at FISAT, Angamali; V. Usha Devi and P. Sathi participated in the 11th National Convention on Knowledge Information Networking held at Coimbatore; S Gopakumar attended a ‘Workshop on UN depository Libraries’ in New Delhi, and Ms. Sosamma Mathew, Ansamma Joseph and P Sathi took part in the National Seminar ‘Re-defining the Role of Public Libraries in India’ at Trivandrum and K Ameer Ali attended a two day National workshop on ‘Creation of Institutional repository/Digital library’ at the Institute of Economic Growth, New Delhi. To upgrade the IT skills, the Computer Centre organised a two half-a-day training programme on updating IT skills. P Sathi, GP Anitha and Ansamma Joseph underwent computer courses on their own in IT Training Institutes in Trivandrum.

During the reporting period, there was an increase in the number of membership of the Library as well as usage by others. The total membership increased from 465 to 633 in 2008-09. The Library continued to serve the users by providing various services like Reference Service, Bibliographic Service and Lending Service etc. Students from all over India and abroad visit CDS Library for their research and information search. Besides the visit of
individuals, groups of students from St Xavier’s College, Palayamkottai, American College Madurai, Adithanar College, Thiruchendur, St Joseph’s College Irinjalakuda, Devi Kumari College, Kuzthurai (K.K District), Scot Christian College Nagercoil, Government College Attingal, M.G University and Cochin University visited the Library. The students from local colleges visit the Library regularly, mostly on Saturdays.

The Library Science students from the Department of Library Science of the Universities of Kerala and Calicut visited the Library to have practical knowledge on the functioning of the library as part of their course of study.

There has been requests from students of National Law Universities, Indian Institutes of Technology and other national institutions to permit them to use the Library for their internship and project work. It has been decided to grant them membership following the normal admission procedures.

A scheme to improve the quality of selection of books was introduced. As part of this process, a ‘Monthly Book Selection List’ is prepared on the basis of book reviews, reputation of authors and publishers and recommendations by other scholars and faculty. The faculty, staff and students are encouraged and supported to visit the book exhibitions in and around Trivandrum so that they can identify books and recommend them. During the year, 1373 books were added to stock out of which 502 are received as gifts from publishers, authors and other sister institutions.

The Library has subscribed to 220 journals and 12 newspapers. The Library received 175 journals as gift. The users can access to 40 journals online. A total of 734 volumes were bound out of which 347 are new Journals’ back volumes.

Twenty new computers of higher configuration with LCD monitors have been added to the Library and six of them are installed in the floors with Online Public Access Catalogue (OPAC). The majority of books and journals have been bar-coded and their bibliographic records entered in the Libsys software as part of the retro-conversion. Bar-coded ID cards were issued to members and the data on membership data are entered into the database.

The Library organized thematic book exhibitions in the Library to coincide with the research work shops and seminars organised at the Centre on topics of Migration, Social Security and International Trade. The Library also generated bibliographies and issued books and journals for the participants.

A separate Documentation Unit to serve the information needs of the researchers of ‘Local Self Governments’ has been set up in the Library. The Unit has the following collections:

- Three hundred and fifty Books (350 titles) on local self governments.
- An updated index of articles on local self governments and decentralization appeared in various Indian Journals.
- Statistical data like census data, statistics for planning, economic reviews and other data sets relevant to the project was collected and updated.

The Electronic Database Unit (EDU) continued to provide services to internal as well as external members. The EDC has 150 databases in Economics and related disciplines. Some of the prestigious databases are indiastat.com, Prowess, Popline, UNComtrades, Annual Survey of Industries, IMF Database, World Development Indicators and National Sample Survey unit level data. The Library has also digitized 260 CDS working papers and placed them at the website of the Centre. The subscription to JSTOR for the year 2009 has been renewed through the ICSSR/NASSDOC consortia. The services offered

- Access to World Integrated Trade Solutions (WITS) database has been activated for the use of students and faculty.
- During the reporting period, Library received 10 books through the Inter-Library Loan service of DELNET (Developing Library Network).
● About 200 journal articles were received from Popline and British Library for Development Studies (BLDS) through their free Internet Document Delivery Service.

● Through the ‘New Economic Papers’ alert service details of more than 10,000 working papers of different institutions was brought to the notice of CDS users.

● Full text of nearly 800 working papers and about 1000 statistical tables were downloaded and sent to different users on demand.

● Several bibliographic searches on various topics were done for users on demand.

● Providing information relating to reliable statistical data tables/sources on various socio-economic indicators at the international/national/state level or even disaggregated to the district level has been a major service of this division.

(b) COMPUTER CENTRE

The Computer Centre provides technological support to achieve the Centre’s objective of knowledge creation and dissemination. The Centre supports teaching/research activities and day-to-day operations of the Library and Administration. It handles tasks such as programming, daily monitoring and tuning of the 140 desktops installed across the campus and other support services to the faculty, staff and students. In addition, the IT wing provides a range of services that include twenty four hour net access, e-mail etc on all the days.

Computer Lab

The Lab has twenty state of the art PCs all with Windows XP, anti-virus, Firefox and other normal utilities (like WinZip, Adobe Reader, CD burning software etc). Ten of these PCs contain statistical packages such as SPSS and Stata and five of them contain the time series package Eviews. In addition, a network-enabled laser printer is installed for printing. This facility is mainly for students and the project staff. The Lab is also used to conduct computer based training programs and workshops.

Students Bay

There are separate twenty four hour computing facilities for M.Phil and Doctoral Students. The M.Phil Bay, housed in the main block contains eight high-end PCs with all the software packages supported by the Centre. The Doctoral Bay, exclusively for doctoral scholars is in the teaching block and there are four PCs equipped with all the required programs/utilities.

Library

Thirty two PCs are installed in different locations of the Library. All of them (but for the PCs allocated to the library staff) are accessible to the users.

All the PCS are connected to the Local Area Network (LAN) and this helps us to provide round-the-clock Net access to all authorized users. In addition, all the service centers mentioned above are wireless (Wif-Fi) enabled.

Apart from the facilities mentioned above, Net enabled PCs have been provided to all faculty and key staff offices with printing facilities. It is the policy of the Centre to continuously upgrade the IT infrastructure and the recent acquisition include SAN server, VPN-enabled firewall and NAS gateway. As envisaged in the IT services expansion plan, the Centre has recently launched a range of new services and they include:

● Network accessible storage for each of the users (the data stored on this storage can be accessed from anywhere on the campus network- and also from the Net);

● Virtual Private Networking (VPN) service that enables faculty to access CDS LAN services (like library OPAC) from the Net;

● Wi-Fi hotspots in different locations (like computer centre, guest house, canteen, teaching block, students bay, KRP block etc); and
self-administrable personal web page for each of the faculty/students. A user’s personal page can be accessed at: http://people.cds.ac.in/user-name.

It is the plan of the Centre to install a web based information repository system and an on-line course management system in a few months time.

(c) STAFF WELFARE AND DEVELOPMENT

The Staff Welfare Fund undertakes welfare activities for the employees of the Centre. The fund instituted in 1999 with an initial corpus from the CDS endowment began in a modest way. The activities carried out are limited financial support in the form of grant-in-aid to last grade employees for medical treatment, marriage of dependent children and financial relief for losses due to natural calamities. The Fund also provides loan to employees for purchase of land for construction of own house, house construction and renovation, education of children, medical treatment, purchase of house hold items and vehicles. During the reporting period, twenty employees were granted loans. Twelve children of employees were awarded merit certificates and cash awards for their scholastic performance in public examinations.
COMMITTEES

Committee of Direction
Professor N.R.Madhava Menon (Chairman)
Professor S.Mahendra Dev (Member)
Shri V. Ramachandran (Member)

FACULTY

Professor and Director

Narayanan Nair K.
Ph.D in Economics
(University of Kerala)

Research Interest: Agriculture and Rural Development
Decentralisation and Local Governments

Professors

Kannan K.P.
Ph.D in Development Studies
(On leave)

Research Interest: Development Economics, Poverty and
Human Development and Labour and Development

Chandan Mukherjee
Ph.D in Statistics
(On leave)

Research Interest: Quantitative Methods in Development Studies

Mohanan Pillai P.
Ph.D. in Economics
(University of Gujarat)

Research Interest: Industrial Economics, Development Economics

Pushpangadan K.
Ph.D in Economics
(Massachusetts, USA)

Research Interest: Industrial Economics, Economics of Water Supply and Sanitation and Econometrics

Sivanandan P.
Ph.D in Economics
(University of Kerala)
(Retired on 31.3.2009)

Research Interest: Agrarian Change, Social and Economic Inequality, Impact of Development Process, Decentralised Governance

Narayana D.
Ph.D in Economics
(ISI Calcutta)

Research Interest: Population and Human Development

Sunil Mani
Ph.D in Economics
(JNU, New Delhi)

Research Interest: Measurement of Innovation, Innovation Policy Instruments and the Telecommunications Industry

Joseph K.J.
Ph.D in Economics
(JNU, New Delhi)

Research Interest: ICT and Development; Innovation Systems
Irudaya Rajan S.  
Ph.D. in Demography  
(IIPS, Bombay)  
*Research Interest: International Migration and Ageing*

Navaneetham K.  
Ph.D in Demography  
(IIPS, Bombay)  
*Research Interest: Population, Health and Development*

Shanta N.  
Ph.D in Economics  
(University of Kerala)  
*Research Interest: Industrial Economics, Applied Macro Economics*

Associate Professors

Udaya Shankar Mishra  
Ph.D in Population Studies  
(IIPS, Bombay)  

Santhakumar V.  
Ph.D in Economics  
(IIT, Madras)  

Vijayamohan Pillai, N.  
Ph.D in Econometrics-Economics  
(Madras University)  
*Research Interest: Public Utility (Energy) Economics; Political Economy; Development Economics; and Applied Statistics*

Harilal, K.N.  
Ph.D in Economics (JNU)  
(On deputation)  
*Research Interests: International Political Economy, Regional Economy of Kerala and Democratic Decentralisation*

Praveena Kodoth  
Ph.D in Economics  
(University of Hyderabad)  
*Research Interest: Gender Studies*

Devika, J  
Ph.D in History  
(MG University, Kottayam)  
*Research Interest: History of Malayalee Modernity, Politics, Gender and Development in Contemporary Kerala Feminist Research, Social Theory*

Lecturers

Arindam Banerjee  
(Thesis submitted in 2008 to JNU, New Delhi)  
*Research Interest: Agricultural Economics, Rural Development, Poverty and Nutrition and Macroeconomic Policy.*

21. Financing of Industrial Innovations in India, How Effective are Tax Incentives for R&D? 
   Sunil Mani.
   Date of commencement: April 2008
   Publication plan: Published as a CDS Working Paper and expected to be published as Journal Article

22. Bridging Innovation System Research and Development Studies: Challenges and Research Opportunities 
   K.J. Joseph and Bengt-Åke Lundvall, Jan Vang, Cristina Chaminade
   Date of commencement: September 2008
   Date of completion: February 2009
   Publication plan: Forthcoming in the Handbook of Innovation Developing countries to be published in journal
   Form in which the work is available: Computer file, hard copy

23. Handbook of Innovation Systems and Developing Countries: Building Domestic Capabilities in a Global Setting 
   K.J. Joseph, B A Lundvall, C Chaminade & Jan Vang (eds)
   Date of commencement: November 2006
   Date of completion: January 2008
   Publication plan: Book

   K.J. Joseph
   Date of commencement February 2007
   Expected date of completion: November 2009.

25. Industry Academy interface in India: Patterns, Determinants and Impact (ongoing study) 
   Vinoj Abraham and K.J. Joseph
   Date of commencement: September 2008
   Date of completion: August 2009
   Publication plan: to be published in journal
   Form in which the work is available: Computer file, hard copy

26. Academia-Industry Interface in India
   Vinoj and K J Joseph
   Sponsor: IDRC, Canada
   Date of commencement: April 2007
   Date of completion: April 2009

27. Innovation Systems for Inclusive Development: Lessons from Rural China and India, K.J. Joseph (ongoing study)
   Date on Initiation: March 2009
   Date of Completion: March 2012
   Publication plan: a few papers
   Seminar/Workshop: one

28. Globalisation of Innovation: Its Manifestation, Determinants, and Implications for the Emerging Economies of China and India, (ongoing project)
   Sunil Mani and T Jayaraman (Tata Institute of Social Sciences, Mumbai), Rakesh Basant (Indian Institute of Management, Ahmedabad) The project also has a Chinese counterpart housed at Tsinghua University, Beijing
   Sponsor: IDRC
   Date of commencement: February 23 2009.
   Date of completion: February 2011

29. Impact of Networks, Globalisation, and their Interaction with EU Strategies’ (INGINEUS) (ongoing project)
   K.J. Joseph and Vinoj Abraham
   Sponsor: IDRC
   Date of commencement: March 2009
   Date of completion: December 2011
   Publication plan: a few papers

30. “Explaining Divergent Stories of Catch-up in the Telecommunication Equipment Industry in Brazil, China, India, and Korea” (jointly with Keun Lee, Soul National University and Qing Mu, Shanghai University of Economics and Finance, Shanghai), Sunil Mani

Date of commencement: December 2008
Expected Date of completion: December 2009
Publication plan: First as CDS working paper and then as a book chapter.
   Date of commencement: December 2008
   Date of completion: April 2009
   Publication plan: Journal article

43. Economic Liberalisation and Financing Pattern of Indian Industries, (ongoing study)
   P.L. Beena
   Date of commencement: January 2008
   Expected date of completion: June 2009
   Publication plan: Chapter in a book

44. Outward FDI, CBM&As and Source of Financing, (ongoing study)
   P.L. Beena
   Date of commencement: January 2008
   Expected date of completion: December 2009
   Publication plan: Chapter in a book

46. Labour Cost and Export Performance: The Case of Textile and Clothing Industry in India, (ongoing study)
   Vinoj Abraham and S.K. Sasikumar
   Date of commencement: January 2009
   Date of completion: December 2009
   Publication plan: to be published in journal
   Form in which the work is available: Computer file, hard copy

47. Preparation of Districts/Panchayats Human Development Reports (ongoing project)
   K. Navaneetham
   Sponsor: Kerala State Planning Board
   Date of commencement: 2007
   Expected date of completion: December 2009
   Publication plan: Report published by the State Planning Board

48. Kottathara Panchayat Human Development Report
   Sponsor: State Planning Board/ UNDP
   Date of commencement: March 2007
   Date of completion: June 2008
   Publication plan: Report published by the State Planning Board

49. Health Inequality in India: Evidence from NFHS 3
   William Joe, U.S. Mishra and K. Navaneetham
   Date of commencement: January 2008
   Date of completion: June 2008
   Form in which the work is available: Economic and Political Weekly, Vol. 43, No. 31, 2-8 August, pp. 41-48

50. Socioeconomic inequalities in child health: Recent evidence from India
   William Joe, U.S. Mishra and K. Navaneetham
   Date of commencement: April 2008
   Date of completion: September 2008
   Form in which the work is available: forthcoming in Global Public Health

51. On Examining Inequalities in Undernourishment among Indian Children: The Income factor and Beyond
   William Joe, U.S. Mishra and K. Navaneetham
   Date of commencement: August 2008
   Date of completion: December 2008
   Form in which the work is available: forthcoming in Journal of Human Development
52. Social Infrastructure and Women’s Undernutrition in India
K. Navaneetham and Sunny Jose
Date of commencement: September 2008
Date of completion: March 2009
Publication plan: Journal article (sent to EPW for publication)
Form in which the work is available: Computer file

53. Patterns and Determinants of Maternal Nutrition in India: Evidence from NFHS-3
K. Navaneetham (ongoing study)
Date of commencement: January 2008
Expected date of completion: December 2009
Publication plans: CDS Working Paper/Journal Article/Chapter in a book (please specify): Journal article: The dimension on social infrastructure and maternal nutrition has been completed and sent for publication.

54. What Does Wealth Quintile Distribution of NFHS-3 Reveal: Some Reflections
T.R. Dilip and U. S. Mishra
Date of commencement: December 2007
Date of completion: September 2008
Publication plan: Published in EPW

55. On Examining Health Inequities in Arab Countries (ongoing study)
Udaya S Mishra and William Joe
Date of commencement: January 2009
Expected date of completion: July 2009
Publication plans: Journal Article

56. Healthcare Payments in India: It’s Catastrophic and Inequity Implications
Udaya S Mishra, William Joe
Date of commencement: November 2007
Date of completion: April 2008
Form in which the work is available: Under Review with Journal

57. Consumption of Inpatient Care Services from Private Hospitals: Trends Emerging from Kerala, India
T.R. Dilip
Date of commencement: September 2007
Date of completion: March 2009
Publication plan: Journal
Form in which the work is available: Computer file

58. Access to Health Care and Basic Minimum Services in Kerala (Phase II)
T.R. Dilip along with D Narayana, CDS and Slim Haddad, University of Montreal (Principal Investigators)
Sponsor: IDRC, Canada
Date of commencement: March 2006
Date of completion: March 2009

59. Assessing Fairness in Financing Outpatient Care in India: Revisiting the WHO Framework
William Joe, Udaya S Mishra and K Navaneetham
Date of commencement: April 2008
Expected date of completion: September 2008
Publication plans: Journal Article still under going revision

60. Age Structural Transitions, Human Capital and Economic Growth in India: Opportunities and Challenges
K. Navaneetham and A. Dharmalingam.
Date of commencement: May 2008
Date of completion: October 2008
Publication plan: Journal article/Chapter in a book
Form in which the work is available: Computer file

61. Demographic Aging and Employment in India
S. Irudaya Rajan
Date of completion: 2008

62. Age Structural Transition and Millennium Development Goals in South Asia (ongoing study)
K. Navaneetham and A. Dharmalingam
Date of commencement: January 2009
Expected date of completion: August 2009

63. On the Progress of School Educational Attainment in India (ongoing study)
T.R. Dilip

Date of commencement: November 2008
Expected date of completion: September 2009
Publication plan: Journal
